## Tutorial Solutions – Week 8

**Question 1:** Let  $W_i$  iid  $N(15, 2)$  be the weights of the individual watermelons. The goal is to find  $n$  such that  $S_n = \sum_{i=1}^n W_i$ , the weight of  $n$  independent watermelons, has no more than a 5% chance of exceeding the weight limit. Now, we know the sum of independent normal random variables is again normally distributed, with mean and variance:

$$S_n \sim N\left(\sum_{i=1}^n 15, \sqrt{\sum_{i=1}^n 2}\right) = N(15n, 2\sqrt{n})$$

So, we need to find the largest value of  $n$  satisfying:

$$\Pr(S_n > 140) \leq 0.05$$

This is equivalent to

$$\begin{aligned} \Pr\left(\frac{S_n - 15n}{2\sqrt{n}} > \frac{140 - 15n}{2\sqrt{n}}\right) &\leq 0.05 \Rightarrow 1 - \Phi\left(\frac{140 - 15n}{2\sqrt{n}}\right) \leq 0.05 \\ &\Rightarrow \Phi\left(\frac{140 - 15n}{2\sqrt{n}}\right) \geq 0.95 \Rightarrow \frac{140 - 15n}{2\sqrt{n}} \geq \Phi^{-1}(0.95) = 1.645 \end{aligned}$$

which means  $n \leq 8.68$ , so 8 watermelons max. [NOTE: You don't have to solve this exactly and can instead just use "trial and error" to see which values work. Indeed, =1 - NORM.DIST(140, 15\*A1, 2\*SQRT(A1), TRUE) in Excel, with a choice for  $n$  in cell A1 will give you the chance of being overweight for that number of melons, and you can just try various values until you find the largest with an answer less than 0.05.]

**Question 2:** Note that  $\ln(S) = \ln(Y_1) + \ln(Y_2) + \dots + \ln(Y_{10})$  and  $\ln(Y_i) \sim N(i, \sqrt{2i-1})$ , as we know the natural logarithm of a random variable with a log-normal distribution has a normal distribution. Thus,  $\ln(S) \sim N(1 + \dots + 10, \sqrt{1 + 3 + 5 + \dots + 19}) = N(55, 10)$ , which means  $S$  is again log-normal with parameters  $\mu = 55$  and  $\sigma = 10$ .

**Question 3:** We can write  $R$  as:

$$R = \sum_{i=1}^{83} n_i R_i / \sum_{i=1}^{83} n_i = \frac{1}{5454000} \sum_{i=1}^{83} n_i R_i = \sum_{i=1}^{83} c_i R_i$$

where  $c_i = n_i / 5454000$ . In other words,  $R$  is a sum of independent normal random variables of the form  $c_i R_i \sim N(48.5c_i, 7.2c_i)$ . Thus, it has a normal distribution with

$$\begin{aligned} E(R) &= \sum_{i=1}^{83} 48.5c_i = 48.5 \sum_{i=1}^{83} n_i / 5454000 = \left(\frac{48.5}{5454000}\right) \sum_{i=1}^{83} n_i \\ &= \left(\frac{48.5}{5454000}\right) (5454000) = 48.5 \end{aligned}$$

and

$$\begin{aligned} SD(R) &= \sqrt{\sum_{i=1}^{83} 7.2^2 c_i^2} = 7.2 \sqrt{\sum_{i=1}^{83} n_i^2 / 5454000^2} = \left(\frac{7.2}{5454000}\right) \sqrt{\sum_{i=1}^{83} n_i^2} \\ &= \left(\frac{7.2}{5454000}\right) (1399000) = 1.847 \end{aligned}$$

Thus,

$$\Pr(R > 50) = \Pr\left(Z > \frac{50 - 48.5}{1.847}\right) = 1 - \Phi(0.812) = 0.208$$

**Mathematical Statistics With Applications** Asha Seth Kapadia, Wenyaw Chan, Lemuel A. Moyé, 2017-07-12 Mathematical statistics typically represents one of the most difficult challenges in statistics particularly for those with more applied rather than mathematical interests and backgrounds Most textbooks on the subject provide little or no review of the advanced calculus topics upon which much of mathematical statistics relies and furthermore contain material that is wholly theoretical thus presenting even greater challenges to those interested in applying advanced statistics to a specific area Mathematical Statistics with Applications presents the background concepts and builds the technical sophistication needed to move on to more advanced studies in multivariate analysis decision theory stochastic processes or computational statistics Applications embedded within theoretical discussions clearly demonstrate the utility of the theory in a useful and relevant field of application and allow readers to avoid sudden exposure to purely theoretical materials With its clear explanations and more than usual emphasis on applications and computation this text reaches out to the many students and professionals more interested in the practical use of statistics to enrich their work in areas such as communications computer science economics astronomy and public health

Basics of Modern Mathematical Statistics Wolfgang Karl Härdle, Vladimir Spokoiny, Vladimir Panov, Weining Wang, 2013-11-08 The complexity of today s statistical data calls for modern mathematical tools Many fields of science make use of mathematical statistics and require continuous updating on statistical technologies Practice makes perfect since mastering the tools makes them applicable Our book of exercises and solutions offers a wide range of applications and numerical solutions based on R In modern mathematical statistics the purpose is to provide statistics students with a number of basic exercises and also an understanding of how the theory can be applied to real world problems The application aspect is also quite important as most previous exercise books are mostly on theoretical derivations Also we add some problems from topics often encountered in recent research papers The book was written for statistics students with one or two years of

coursework in mathematical statistics and probability professors who hold courses in mathematical statistics and researchers in other fields who would like to do some exercises on math statistics

*Probability Theory and Statistics with Real World Applications* Peter Zörnig, 2024-08-19 The idea of the book is to present a text that is useful for both students of quantitative sciences and practitioners who work with univariate or multivariate probabilistic models Since the text should also be suitable for self study excessive formalism is avoided though mathematical rigor is retained A deeper insight into the topics is provided by detailed examples and illustrations The book covers the standard content of a course in probability and statistics However the second edition includes two new chapters about distribution theory and exploratory data analysis The first mentioned chapter certainly goes beyond the standard material It is presented to reflect the growing practical importance of developing new distributions The second new chapter studies intensively one and bidimensional concepts like asymmetry kurtosis correlation and determination coefficients In particular examples are intended to enable the reader to take a critical look at the appropriateness of the geometrically motivated concepts
