Case Studies in Disaster Response and Emergency Management Nicolas A. Valcik, Paul E. Tracy, 2017-04-28 Designed to enable practitioners and students to evaluate a variety of real life emergencies from every angle this new edition of *Case Studies in Disaster Response and Emergency Management* provides clear thorough step by step descriptions of more than 50 major disasters or emergencies Arranged chronologically the case studies involve incidents from around the globe with topics including natural disasters industrial accidents epidemics and terrorist attacks A series of questions throughout each case study encourages the reader to think critically about the problem at hand to select a course of action and to then see the results of the decisions that were made This hands on approach invites practitioners and students to apply learned theoretical emergency management techniques in a safe test environment *Case Studies in Disaster Response and Emergency Management 2e* provides readers with the most modern and current case studies in disaster response and emergency management and can be used in group project settings as individual homework assignments in training courses for first responders law enforcement and government employees or to complement existing emergency management textbooks in Public Administration Public Management and Public Affairs programs

Mathematical Modelling and Computer Simulation of Activated Sludge Systems Jacek Makinia, Ewa Zaborowska, 2020-03-02 Mathematical Modelling and Computer Simulation of Activated Sludge Systems Second Edition provides from the process engineering perspective a comprehensive and up to date overview regarding various aspects of the mechanistic white box modelling and simulation of advanced activated sludge systems performing biological nutrient removal In the new edition of the book a special focus is given to nitrogen removal and the latest developments in modelling the innovative nitrogen removal processes Furthermore a new section on micropollutant removal has been added The focus of modelling has been shifting in the last years to models that can describe the performance of a whole plant plant wide modelling The expanded part of this new edition introduces models describing the most important processes interrelated with the mainstream activated sludge systems as well as models describing the energy balance operating costs and environmental impact The complex process evaluation including minimization of energy consumption and carbon footprint is in line with the present and future wastewater treatment goals By combining a general introduction and a textbook this book serves both intermediate and more experienced model users both researchers and practitioners as a comprehensive guide to modelling and simulation studies The book can be used as a supplemental material at graduate and post graduate levels of wastewater engineering modelling courses

Precipitation

Enhancement Roscoe Braham, 2015-03-30 This book is the outcome of a workshop held at Park City Utah 23-25 May 1984. It is a collection of papers focusing on physics of precipitation formation in clouds and the response of clouds to glaciogenic seeding. This book documents the debates and discussions that surrounded the topic of glaciogenic seeding during the time of the workshop. It is interesting as a historical evidence of the scientific progress of that time. Handbook of Advanced Industrial and Hazardous Wastes Management Lawrence K. Wang, Mu-Hao S. Wang, Yung-Tse Hung, Nazih K. Shammass, Jiaping Paul Chen, 2017-10-30 This volume provides in depth coverage of environmental pollution sources, waste characteristics, control technologies, management strategies, facility innovations, process alternatives, costs, case histories, effluent standards, and future trends in waste treatment processes. It delineates methodologies, technologies, and the regional and global effects of important pollution control practices. It focuses on specific industrial and manufacturing wastes and their remediation. Topics include heavy metals, electronics, chemical, and textile manufacturing. **Proceedings of the 1989 Georgia Water Resources Conference** Kathryn J. Hatcher, 1989 *Tripping from the Fall Line* David K. Brezinski, Jeffrey P. Halka, Richard A. Ortt Jr., 2015-10-07 Emanating from the Fall Line city of Baltimore, site of the 2015 GSA Annual Meeting, these trips reflect the diversity of geological features in the mid-Atlantic region, including the Piedmont, Appalachian Mountains, and Coastal Plain, and the importance of geology on the development and construction of the Baltimore-Washington D.C. metropolitan area. Landscapes and Landforms of Eastern Canada Olav Slaymaker, Norm Catto, 2020-02-13 This critical book focuses on the geomorphological landscapes of eastern Canada and provides a companion volume to *Landscapes and Landforms of Western Canada* (2017). There are a number of unique characteristics of eastern Canada's landscapes, notably its magnificent coastlines, the extraordinary variety and extent of wetlands, the huge Great Lakes-St. Lawrence basin, the high incidence of meteorite craters, the spectacular Niagara Falls, urban karst in Montreal and Ottawa, youthful glaciated karst in Ontario, Newfoundland, Quebec, and Nova Scotia, the ubiquitous permafrost terrain of Nunavut, Labrador, and northern Quebec, and the magnificent arctic fjords and glaciers. Looking at coastlines, the tidal extremes of the Bay of Fundy are world renowned; the structural complexity of the island of Newfoundland is less well known but produces an astounding variety of coastlines in close succession; the arctic fjordlands of Baffin and Ellesmere islands and the extravagant raised beaches of Hudson Bay bear comparison with the classic fjords of Norway and the Baltic Sea raised beaches. As for wetlands, there are distinctive Arctic, Subarctic, Boreal, Eastern Temperate, and Atlantic wetlands, and their extent is second only to those of Russia. In the Hudson and James Bay regions, between 75-100% of the terrestrial surface is comprised of wetlands. One of North America's largest river basins, the Great Lakes-St. Lawrence basin, has its source in Minnesota, straddles the USA-Canada border, and debouches into Quebec as the St. Lawrence River, and evolves through its estuary into the Gulf of St. Lawrence, a journey of almost 5,000 km. As far as meteorite craters are concerned, 10% of the world's total are located in eastern Canada, including some of the largest and most complex landforms. They are preserved

preferentially in the ancient Shield terrain of Quebec Finally the three million km² of permafrost controlled relief in eastern Canada serves as a reminder of the vulnerability of eastern Canada's landscapes to climate change Effects of warming are expressed through thawing of the permafrost disruption of transportation corridors and urban construction problems ever present geomorphic hazards

Ice Adhesion K. L. Mittal, Chang-Hwan Choi, 2020-12-15 This unique book presents ways to mitigate the disastrous effects of snow ice accumulation and discusses the mechanisms of new coatings deicing technologies The strategies currently used to combat ice accumulation problems involve chemical mechanical or electrical approaches These are expensive and labor intensive and the use of chemicals raises serious environmental concerns The availability of truly icephobic surfaces or coatings will be a big boon in preventing the devastating effects of ice accumulation Currently there is tremendous interest in harnessing nanotechnology in rendering surfaces icephobic or in devising icephobic surface materials and coatings and all signals indicate that such interest will continue unabated in the future As the key issue regarding icephobic materials or coatings is their durability much effort is being spent in developing surface materials or coatings which can be effective over a long period With the tremendous activity in this arena there is strong hope that in the not too distant future durable surface materials or coatings will come to fruition This book contains 20 chapters by subject matter experts and is divided into three parts Part 1 Fundamentals of Ice Formation and Characterization Part 2 Ice Adhesion and Its Measurement and Part 3 Methods to Mitigate Ice Adhesion The topics covered include factors influencing the formation adhesion and friction of ice ice nucleation on solid surfaces physics of ice nucleation and growth on a surface condensation frosting defrosting properties of structured surfaces relationship between surface free energy and ice adhesion to surfaces metrology of ice adhesion test methods for quantifying ice adhesion strength to surfaces interlaboratory studies of ice adhesion strength mechanisms of surface icing and deicing technologies icephobicities of superhydrophobic surfaces anti icing using microstructured surfaces icephobic surfaces features and challenges bio inspired anti icing surface materials durability of anti icing coatings durability of icephobic coatings bio inspired icephobic coatings protection from ice accretion on aircraft and numerical modeling and its application to inflight icing
