Florez-Escobar, 2015-09-01 Containing the proceedings of the 10th International Conference on Urban Regeneration and Sustainability this book addresses the multidisciplinary aspects of urban planning a result of the increasing size of cities the amount of resources and services required and the complexity of modern society Most of earth's population now lives in cities and the process of urbanisation continues generating many problems deriving from the drift of the population towards them These problems can be resolved by cities becoming efficient habitats saving resources in a way that improves the quality and standard of living The process however faces a number of major challenges related to reducing pollution improving main transportation and infrastructure systems New urban solutions are required to optimise the use of space and energy resources leading to improvements in the environment i.e. reduction in air water and soil pollution as well as efficient ways to deal with waste generation These challenges contribute to the development of social and economic imbalances and require the development of new solutions Large cities are probably the most complex mechanisms to manage However despite such complexity they represent a fertile ground for architects engineers city planners social and political scientists and other professionals able to conceive new ideas and time them according to technological advances and human requirements The challenge of planning sustainable cities lies in considering their dynamics the exchange of energy and matter and the function and maintenance of ordered structures directly or indirectly supplied and maintained by natural systems Topics covered include Urban Strategies Planning Development and Management Urban Conservation and Regeneration The Community and the City Eco town Planning Landscape Planning and Design Environmental Management Sustainable Energy and the City Transportation Quality of Life Architectural Issues Cultural Heritage Issues Intelligent Environment and Emerging Technologies Planning for Risk Disaster and Emergency Response Safety and Security Waste Management Infrastructure and Society Urban Metabolism

Wang,Xudong Fu,Qihua Ran,Biswajeet Pradhan,2024-03-13 In mountainous areas due to the unique geological and topographical conditions and along with the impact of global climate change extreme rainfall events often occur and induce natural disasters such as flash floods debris flows landslides dammed lakes and others These water related natural disasters WRNDs frequently occur around the world such as the July 29th 1998 debris flow and landslide dam at Capricorn Creek in Mount Meager Volcanic Complex southern Canada the flash flood of 20th August 2018 in Raganello Gorge southern Italy and the 2007 summer floods in the United Kingdom WRNDs are more serious in Southeast Asia particularly in Southwest China where many places suffer from such disasters in the flood season every year such as the May 20th 2012 flash flood debris flow among the hit area of Wenchuan earthquake the June 24th 2017 Xinmo Catastrophic landslide in Mao county and in 2018 the two sequential landslide dammed lake events at Jinsha River These WRNDs not only cause heavy casualties and property losses but also destroy the ecological environment These WRNDs are not only the concern of government managers and engineers but also deserve more in depth study from researchers Formation and evolution mechanisms of WRNDs are very complicated and influenced by several aspects such as geological and topographical conditions hydrometeorological conditions geomaterial properties rainfall history and flow condition and others Field and laboratory tests can help us to better understand the related mechanism behind the disasters Theoretical and empirical models modeling and numerical methods can provide more reasonable evaluation and forecasting results of WRNDs but a more in depth understanding is needed Furthermore for the risk control and hazard prevention and mitigation new equipment and technologies have been developed and have achieved some progress in recent years but the fast and effective emergency treatments for WRNDs need more attention
