Key Concept

Scientists analyze evidence to find the strongest evidence. Stronger evidence makes an argument more convincing.

Scientists study evidence about weather to understand how it works and to predict future conditions. They collect data from things like temperature, precipitation, and wind and air pressure. By using different types of evidence, they can find the most reliable information.

For the most confident predictions for weather, scientists report the same weather for more than one day. This helps them make better decisions about the weather and it also helps them make better decisions about the weather.

As a Christian, the author also believes it behooves mankind to ask: What does the Bible say about this subject? It turns out that the Bible has quite a lot to say: 1. God created and 2. God controls the heavens, the earth, and all life in it. 3. God also controls the wind and the rain; that is, He controls weather and climate systems. In addition to presenting the details of the Bible teaching, discussions cover process control systems, computer modelling, and the composition and properties of air as they apply to the global warming debate. Following background discussions, this book presents the author's views and recommendations. **Climate Change in Coastal**
