Verifpal User Manual Nadim Kobeissi, 2020-03-02 The security of cryptographic protocols remains as relevant as ever with systems such as TLS and Signal being responsible for much of the Web's security guarantees One main venue for the analysis and verification of these protocols has been automated analysis with formal verification tools such as ProVerif CryptoVerif and Tamarin Indeed these tools have led to confirming security guarantees as well as finding attacks in secure channel protocols including TLS and Signal However formal verification in general has not managed to significantly attract a wider audience Verifpal is new software for verifying the security of cryptographic protocols Building upon contemporary research in symbolic formal verification Verifpal's main aim is to appeal more to real world practitioners students and engineers without sacrificing comprehensive formal verification features In order to achieve this Verifpal introduces a new intuitive language for modeling protocols that is much easier to write and understand than the languages employed by existing tools At the same time Verifpal is able to model protocols under an active attacker with unbounded sessions and fresh values and supports queries for advanced security properties such as forward secrecy or key compromise impersonation Verifpal has already been used to verify security properties for Signal Scuttlebutt TLS 1.3 Telegram and other protocols It is a community focused project and available under a GPLv3 license The Verifpal language is meant to illustrate protocols close to how one may describe them in an informal conversation while still being precise and expressive enough for formal modeling Verifpal reasons about the protocol model with explicit principals Alice and Bob exist and have independent

states Easy to Understand Analysis Output When a contradiction is found for a query the result is related in a readable format that ties the attack to a real world scenario This is done by using terminology to indicate how the attack could have been possible such as through a man in the middle on ephemeral keys Friendly and Integrated Software Verifpal comes with a Visual Studio Code extension that offers syntax highlighting and soon live query verification within Visual Studio Code allowing developers to obtain insights on their model as they are writing it

"I don't translate, I create!" Vanessa Drexler, 2016-01-05 I don t translate I create This is the slogan of a translation agency called Sternkopf Communications located in Fl ha Germany The translators at this translation agency are specialized in the field of marketing and perceive creativeness their daily bread But what does this actually mean I don t translate I create Undoubtedly the translation of a text from one language into another is not an easy and straightforward process On the contrary the translator needs to invest much time and one or the other headache before a target text TT finally sounds natural fluent coherent and logical for the target audience Different possible translation solutions will have to be considered language as well as culture related equivalents often are not easily at hand etc Would it not be pleasant if machine translation MT was there to help with this process Yet despite the enormous importance of creativity in translating computer aided translation CAT tools are being used frequently by professional translators not to replace but to support the translator in their daily business CAT tools enable their users to translate in a more consistent way since they search source texts for words phrases or sentences that have

already been translated before and stored in the TM so that the translator does not need to translate this text unit again from scratch. Considering that this process brings about what could be called semi mechanical TTs, the use of CAT tools seems to stand in stark contrast to the importance of creativity mentioned above. Thus the question arises whether CAT tools influence the creative energy of translators and if this is the case whether translators regard this influence as rather positive or negative. In this context it is also important to consider which fields of expertise generally demand a high degree of uniformity/consistency in translations and which subject fields generally allow for a high degree of creative freedom. Accordingly this paper pursues two related purposes. The first is to compare five CAT tools in their degree of usability. The second purpose is to identify translators' perspectives on uniformity and creativity in translations with the goal of shedding light on the question whether CAT tools generally tend to positively or negatively influence the translation process on a rather linguistic than technological basis.
