*Cataclysmic Cosmic Events and How to Observe Them* Martin Mobberley,2009-03-01 In the Victorian era or for non British readers the mid to late nineteenth century amateur astronomy tended to center on Solar System objects The Moon and planets as well as bright comets were the key objects of interest The brighter variable stars were monitored but photography was in its infancy and digital imaging lay a century in the future Today at the start of the twenty first century amateurs are better equipped than any professionals of the mid twentieth century let alone the nineteenth An amateur equipped with a 30 cm telescope and a CCD camera can easily image objects below magnitude 20 and from very dark sites 22 or 23 Such limits would have been within the realm of the 100 and 200 inch reflectors on Mount Wilson and Mount Palomar in the 1950s but no other observatories However even those telescopes took hours to reach such limits and then the photographic plates had to be developed fixed and examined by eye In the modern era digital images can be obtained in minutes and analyzed on the fly while more images are being downloaded Developments can be e mailed to other interested amateurs in real time during an observing session so that when a cataclysmic event takes place amateurs worldwide know about it As recently as the 1980s even professional astronomers could only dream of such instantaneous communication and

someone who has any kind of detailed knowledge The reason isn't lack of interest far from it but is because all the books currently available are pitched at professional astronomers and degree students and are to say the least difficult to read This is the first non technical book on this subject written specifically for practical amateur astronomers It includes all the science necessary for a qualitative understanding of stellar spectra but avoids a mathematical treatment which would alienate many of its intended readers Any amateur astronomer who carries out or who is interested in observational spectroscopy and who wants a non technical account of the physical processes which determine the intensity and profile morphology of lines in stellar spectra will find this is the only book written specially for him And of course armchair astronomers who simply want to understand the physical processes which shape lines in stellar spectra will find this book equally fascinating Industry 4.0 Technologies for Education P.
