1 Introduction

A very popular upgrade for a wide range of engines is the fitment of twin Weber DCOE carburetors (Figure 1). There exists a great deal of mystique and confusion with regard to setting up Weber DCOE carburetors, and in particular the correct starting point for jetting. However, Weber DCOE carburetors are not as complicated as many fear, and while fine-tuning is best performed using a rolling road dynamometer (chassis dyno) an excellent first guess can be obtained based upon the engine size and power band desired. The following provides the calculations that are required to achieve an excellent initial set-up, irrespective of the application.
