Batch Modernization on z/OS Mike Ebbers,Elsie Ramos,Snehal Antani,Patrick Bruinsma,Manuel Mueller,Martin Packer,Christian Strauer,Sridhar Sudarsan,Susann Thomas,Andreas Wagner,Janet Wall,IBM Redbooks,2012-07-26 Mainframe computers play a central role in the daily operations of many of the world s largest

corporations and batch processing is a fundamental part of the workloads that run on the mainframe. A large portion of the workload on IBM z OS systems is processed in batch mode. Although several IBM Redbooks publications discuss application modernization on the IBM z OS platform, this book specifically addresses batch processing in detail. Many different technologies are available in a batch environment on z OS systems. This book demonstrates these technologies and shows how the z OS system offers a sophisticated environment for batch. In this practical book, we discuss a variety of themes that are of importance for batch workloads on z OS systems and offer examples that you can try on your own system. The audience for this book includes IT architects and application developers with a focus on batch processing on the z OS platform.

Siebel Server Administration 8 Redbook, *Application Development for IBM CICS Web Services* O'Grady James, Ian Burnett, Jim Harrison, San Yong Liu, Xue Yong Zhang, IBM Redbooks, 2015-01-27. This IBM Redbooks publication focuses on developing Web service applications in IBM CICS. It takes the broad view of developing and modernizing CICS applications for XML Web services, SOAP, and SOA support and lays out a reference architecture for developing these kinds of applications. We start by discussing Web services in general, then review how CICS implements Web services. We offer an overview of different development approaches: bottom up, top down, and meet in the middle. We then

look at how you would go about exposing a CICS application as a Web service provider again looking at the different approaches The book then steps through the process of creating a CICS Web service requester We follow this by looking at CICS application aggregation including 3270 applications with IBM Rational Application Developer for IBM System z and how to implement CICS Web Services using CICS Cloud technology The first part is concluded with hints and tips to help you when implementing this technology Part two of this publication provides performance figures for a basic Web service We investigate some common variables and examine their effects on the performance of CICS as both a requester and provider of Web services

IBM CICS and the Coupling Facility: Beyond the Basics Arndt Eade,Randy Frerking,Rich Jackson,Kellie Mathis,IBM Redbooks,2018-02-21 It s easy to look at the title of a book and think that s old news or I already know all there is to know on that subject But before you dismiss this publication consider just how far the IBM Parallel Sysplex architecture has come From the early days the mainframe has embraced a shared everything approach The original designers coded IBM z OS called IBM MVSTM or IBM OS 390 back then with the functionality necessary for the operating system to create the repositories manage the data flow and ensure the integrity of the systems involved From there the middleware systems provided the exploitation and advanced functions to mature the technology The component in the middle of all this great technology can easily be taken for granted That is the IBM Coupling Facility This IBM Redbooks publication discusses both traditional uses for the IBM Coupling

Facility technology and new ways to use it with products such as IBM CICS You can learn how to perform new functions and have these functions benefit from the scalability and availability achieved only in a mainframe ecosystem Open standards are a large part of considerations today as most companies run IT shops with a mix of technology components As the world embraces these technologies it is necessary to understand how to mix the world of mainframe architectures and products with other open architectures This mix allows the best tool to be used to solve processing needs at the right cost and service levels Often the functions needed for modern processing can be found in house in places where staff are skilled and that already deliver the robust production environments you count on daily This book discusses these modern functions and how to achieve them with CICS use of the IBM Coupling Facility You will learn how one IBM client Walmart took these concepts far beyond the original design as they share their experiences and even share code examples to help you get started The last chapter of this book shows what can be achieved when a combination of old and new functions are use together Even if you have familiarity with what could be done with the IBM Coupling Facility in the past there is much to learn and deploy in a modern world Those who are familiar with the IBM Coupling Facility might find the content of this book helpful Additionally readers who are considering how to use the IBM Coupling Facility technology within their environment might also find useful information in the chapters that follow
