introduction to water distribution systems chapter 5 alaska - Dec 27 2021

web the basic function of a water distribution system is to transport the water from the treatment facility to the customer in addition distribution systems may also provide storage as well as provide flow and pressure adequate for fire protection

typically the size of water mains pump station capacity and storage reservoir volume is determined by the size of the water distribution system. This paper incorporates the hydraulic transients of water distribution systems (WDSS) into the power water flow analysis of the IWS and proposes an extended period quasi steady state IWS.
