DESCRIPTION

This wall-mounted, low voltage thermostat maintains room temperature by controlling the operation of multi-stage systems. Use this thermostat for applications requiring up to three stages of heat and up to two stages of cool. Indicator lights show the system status. The user may program up to four time and two temperature settings per 24 hour period and may program each day independently. The thermostat will store both heating and cooling programs simultaneously. A 9 volt Energizer® battery will maintain the stored program for approximately one week, if incoming power should fail. If power failure is extensive and the program is lost, after power restoration, the thermostat will automatically maintain a factory preprogrammed heating temperature of 64°F or a cooling temperature of 82°F.

PRECAUTIONS

If in doubt about whether your wiring is millivolt, line, or low voltage, have it inspected by a qualified heating and air conditioning contractor, electrician, or someone familiar with basic electricity and wiring.

Do not exceed the specification ratings.

All wiring must conform to local and national electrical codes and ordinances.

This control is a precision instrument, and should be handled carefully. Rough handling or distorting components could cause the control to malfunction.
