Larson, 2021-09-01 One way to understand the world is by looking at its most basic building blocks All the substances in the
world are made up of atoms which interact with each other by exchanging or sharing electrons All atoms can be organized
into the periodic table of elements which groups atoms by their chemical properties Deep within the atom lies the nucleus
which itself contains the elementary particles called quarks By building powerful particle accelerators and enormous
detectors physicists are able to probe the most fundamental constituents of matter Filled with full color photographs and
