Differential Equations: Methods and Applications Belkacem Said-Houari, 2016-01-11 This book presents a variety of techniques for solving ordinary differential equations analytically and features a wealth of examples Focusing on the modeling of real world phenomena it begins with a basic introduction to differential equations followed by linear and nonlinear first order equations and a detailed treatment of the second order linear equations After presenting solution methods for the Laplace transform and power series it lastly presents systems of equations and offers an introduction to the stability theory To help readers practice the theory covered two types of exercises are provided those that illustrate the general theory and others designed to expand on the text material Detailed solutions to all the exercises are included The book is excellently suited for use as a textbook for an undergraduate class of all disciplines in ordinary differential equations

Student Solutions Manual for Fundamentals of Differential Equations and Fundamentals of Differential Equations and Boundary Value Problems R. Nagle, Edward Saff, Arthur Snider, 2017-06-28 For one semester sophomore or junior level courses in Differential Equations Fundamentals of Differential Equations presents the basic theory of differential equations and offers a variety of modern applications in science and engineering Also available in the version Fundamentals of Differential Equations with Boundary Value Problems these flexible texts offer the instructor many choices in syllabus design course emphasis theory methodology applications and numerical methods and in using commercially available computer software

Modeling with Differential Equations in Chemical Engineering Stanley M. Walas, 1991 Modelling with Differential Equations in Chemical Engineering covers the modelling of rate processes of engineering in terms of differential equations While it includes the purely mathematical aspects of the solution of differential equations the main emphasis is on the derivation and solution of major equations of engineering and applied science Methods of solving differential equations by analytical and numerical

means are presented in detail with many solved examples and problems for solution by the reader Emphasis is placed on numerical and computer methods of solution A key chapter in the book is devoted to the principles of mathematical modelling These principles are applied to the equations in important engineering areas The major disciplines covered are thermodynamics diffusion and mass transfer heat transfer fluid dynamics chemical reactions and automatic control These topics are of particular value to chemical engineers but also are of interest to mechanical civil and environmental engineers as well as applied scientists The material is also suitable for undergraduate and beginning graduate students as well as for review by practising engineers
