Additional Notes

## Experiments

**pp. 14-15**

While a lot of the rubber we use today is made with chemicals by scientists, people originally used rubber from certain plants. The white, milky material is called latex. Several plants produce latex, including dandelions. The next time you break off the flower of a dandelion, look closely. The sticky white liquid in the plant is natural latex.

**pp. 16-17**

People find solutions to problems. Since the reinforced rooms often flood, people engineered a great solution to build their houses on stilts. People who live next to the ocean sometimes do this, too. Does your house have a basement? Some places do not have basements because water will seep in from the ground in flooded cities. People build taller buildings so there's more space for people.

**pp. 18-19**

Some words use multiple spellings. Gargantuan is spelled in at least four different ways. As we use words, we "vote" for which version we would like to see used more often. Over time, language changes to match what people say.

Conservation is important, and losing animal species is not good. But food and resources are also helpful to us. This is a great opportunity to begin to talk about this important topic and comparing needs and wants. Where do you stand on all this, and what do you do to help make the world a better place? If your children are interested, this is a great opportunity to learn more.

*100 Top Picks for Homeschool Curriculum* Cathy Duffy, 2005 A critical volume for the homeschooling community that helps parents make informed choices regarding learning styles and curriculum

*Teaching Numeracy* Margie Pearse, K. M. Walton, 2011-03-23 Do some of your students arrive at wildly wrong answers to mathematical problems but have no idea why? If so, they are not alone. Many students lack basic numeracy, the ability to think through the math logically, solve problems, and apply it outside of the classroom. This book outlines nine critical thinking habits that foster numerate learning and details practical ways to incorporate those habits into instruction. Referencing the new common core standards, NCTM standards, and established literacy practices, the authors include how to use this in my math class tomorrow applications throughout the book, which shows you how to monitor and repair students' understanding. Guide students to recognize patterns, represent mathematics non-linguistically, encourage questioning for understanding, develop students' mathematics vocabulary, create a collaborative environment. Latter chapters show how to develop numeracy-rich lesson plans and provide several ready-to-use models with clear directions and student handouts. The book's practices, activities, and problems will help you move your students from simply doing the math to a deeper understanding of how to think through the math.

The Science Step by Step Student Book uses systematic sequences of picture-based directions that follow real-life photos to introduce science to students. Building on skills developed in Picture Directions Student Book, pages carry out engaging hands-on discovery activities. Students learn that their actions have an effect on objects, and this gives them a sense of curiosity and wonder, desirable qualities for learners. As students learn to attend to tasks and follow directions without adult assistance and prompting, it builds greater independence and confidence.
