**Sustainable Management of Soil and Environment** Ram Swaroop Meena, Sandeep Kumar, Jitendra Singh

Bohra, Mangi Lal Jat, 2019-10-02 Fertilizers have been used extensively around the globe since the Green Revolution due to the high subsidies. However, extensive fertilizer use exacerbates soil degradation and causes yield stagnation and, as a result, threatens food security and soil sustainability especially in developing countries. This means that sustainable soil and environmental management are vital to provide food and nutritional security for present and future generations. This has led to the International Union of Soil Science (IUSS) declaring 2015–2024 the International Decade of Soils. This book focuses on the impact of sustainable management of soil and environment on improving the functioning of soil ecosystems and agronomic productivity and also discusses food security, nutrient cycling, recent advances in INM technologies, eco-friendly cultivation, agricultural practices to reduce greenhouse gas (GHG) emissions as well as conservation agriculture and its effects and strategies for soil sustainability. Offering a comprehensive overview of management in the context of the sustainability of soil and the agroecosystems that it supports, it demonstrates the options available and provides insights into restoring soil health and matching soil nutrient supply with crop demand to ensure nutritional security in an eco-friendly environment.
