

How to make a research poster: A guide for students

Many technologies and breakthroughs would not be possible without research. It is important to keep members of the community informed about the latest updates. One way to do that is through research posters.

Introduction

Posters are popular method of presenting research findings in a concise and visually pleasing manner. They are commonly used in conferences and meetings. Start by introducing the subject of your research and/or your hypothesis. What are the questions about this topic that you want to answer? What new things can it contribute to the existing literature?

Objective

It is important for your readers to know what you want to achieve with your research. State this as clear as possible.

Methodology

Let readers know how you did your study. Methods can vary depending on the subject or results you want to see. These methods may include:

- Interviews
- Surveys
- Experimental studies
- Experiments

Remember, if you include a writing handbook that were used as references.

Results/Findings

Results show the outcome of the research and should answer the question of hypothesis stated in the introduction.

- State what you've found from your study.
- Try to show how your findings fit in.

Abstract

Adding an abstract can make your poster more appealing to the

Analysis

Expand on your findings by discussing what methods were used to analyze your data. It can get technical as long as it's simple and direct to the point. Use bullet points for emphasis. Include any graphs, tables, illustrations, and other images that support the study and show a visual analysis of the data. Make sure they are large enough to be seen from a distance but not clutter the poster.

Use illustrations to present your data in a clear form.

Write a poster that is clearly visible and has graphs to show the results of the study.

Graphs are great in helping make numbers easier to understand.

Conclusion

Summarize your study and let the readers know how to interpret your findings. You can also add a description of how you got there for idea of what comes next. The reader can also include any implications of the study and if there are any future or recommendations for future studies.

References

Remember to cite any references you used in your study. These references are provided at the bottom of the page.

Authors

Remember if you have multiple authors in the study, include in the title. Don't forget to include their contact info. Make sure it's clear who.

Abstract

Remember to include a short summary of the study and what you found. It's a good idea to include the abstract at the top of the page.
