Bombarded Cyrus Krohn,Tom Farmer,2020-10-10 Imagine an imminent America where citizens are bombarded with personalized political messages from every smart device yet information is so suspect nobody can tell what the truth is It means oceans of disinformation engineered to sow false beliefs or simply disorient The coronavirus pandemic provided a foretaste of an infuriating dystopian future From the start Americans fought over the most basic facts of the crisis from death tolls to quack cures to the wisdom of stay at home orders The splintered digital infosphere bred confusion and delusion some of it fatal Now think of our campaigns and elections The digital information age means more than hyper targeted just for you messages from insurance companies and presidential candidates alike Big Data is on the way to fueling information environments so fine tuned no two of us hold the same view of reality and no two voters hear the same pitch Already citizens

don't know who to trust or what to believe about COVID 19 or anything else. If we ask nothing more of tech providers or digital citizens the fog will continue to thicken. Irritation will merge into despair and then numbness and democracy teeters. Digital pioneer Cyrus Krohn knows the territory and in *Bombarded: How to Fight Back Against the Online Assault on Democracy* Krohn locates the roots of our blooming political chaos in the earliest days of the World Wide Web. But he goes beyond recounting 25 years of destabilizing Internet shock waves and his own role in building digital culture. Krohn rolls out a provocative action plan for rescuing the American system of campaigns and elections while there is still time. Trying to shield yourself from disinformation and deep fakes, Cyrus Krohn offers a five step program to fight back. This book rings true. Jill Dougherty, Former CNN Moscow Bureau Chief

Cyberspaces and Global Affairs Sean S. Costigan, Jake Perry, 2016-05-13 From the Facebook revolutions in the Arab world to the use of social networking in the aftermath of disasters in Japan and Haiti to the spread of mobile telephony throughout the developing world, all of these developments are part of how information and communication technologies are altering global affairs. With the rise of the social web and applications like Facebook, YouTube and Twitter, scholars and practitioners of international affairs are adapting to this new information space across a wide scale of issue areas. In conflict resolution, dialogues and communication are taking the form of open social networks while in the legal realm where cyberspace is largely lawless, states are stepping up policing efforts to combat online criminality and hackers are finding new ways around increasingly sophisticated censorship. Militaries are moving to deeply incorporate information technologies into their doctrines and protesters are developing innovative uses of technology to keep one step ahead of the authorities. The essays and topical cases in this book explore such issues as networks and networked thinking, information ownership, censorship, neutrality, cyberwars, humanitarian needs, terrorism, privacy and rebellion, giving a comprehensive overview of the core issues in the field, complemented by real world examples.

The Web as History Niels Brügger, Ralph Schroeder, 2017-03-06 The World Wide Web has now been in use for more than 20 years. From early browsers to today's principal source of information, entertainment and much else, the Web is an integral part of our daily lives to the extent that some people believe if it's not online it doesn't exist. While this statement is not entirely true, it is becoming increasingly accurate and reflects the Web's role as an indispensable treasure trove. It is curious, therefore, that historians and social scientists have thus far made little use of the Web to investigate historical patterns of culture and society, despite making good use of letters, novels, newspapers, radio and television programmes and other pre-digital artefacts. This volume argues that now is the time to ask what we have learnt from the Web so far. The 12 chapters explore this topic from a number of interdisciplinary angles through histories of national web spaces and case studies of different government and media domains as well as an introduction that provides an overview of this exciting new area of research.
