Green Technology Dustin Mulvaney, 2011-05-03

Green Technology: An A to Z Guide explores the essential role of technology and its most recent developments toward a sustainable environment. Twofold in its definition, green technology includes the changing of existing technology toward energy conservation as well as the creation of new clean technology aimed at utilizing renewable resources. With a primary focus on waste management, the volume presents more than 150 articles in A to Z format featuring such disciplines as nanoscience, biochemistry, information technology, and environmental engineering. Scholars and experts in their fields present a full range of topics from applications of green technology to The Green Grid global consortium to membrane technology and water purification systems to waste-to-energy technology. This work culminates in an outstanding reference available in both print and electronic formats for academic, university, and public libraries. Vivid photographs, searchable hyperlinks, an extensive resource guide, numerous cross-references, and a clear, accessible writing style make the Green Society volumes ideal for classroom use as well as for research.

Virginia Review, 1991

Conflicts, Participation and Acceptability in Nuclear Waste Governance Achim Brunnengräber, Maria Rosaria Di Nucci, 2019-07-12

This book is the last part of a trilogy and concludes a long-term project that focussed on nuclear waste governance in 24 countries. It deals with core themes of the disposal of high-level radioactive waste (HLW), e.g. the wicked problems of housing nuclear waste disposal facilities, public participation and public discourse, voluntarism and compensation in siting, as well as the role of advisory bodies and commissions. The volume reflects on the diverse factors that shape the debate on what can be considered an acceptable solution and on various strategies adopted in order to minimise conflicts and possibly increase acceptability. The various theoretical and empirical contributions shed light on several mechanisms and issues touched upon in these strategies, such as the role of trust, voluntarism, economic interests at stake, compensation, ethics, governance, and participation.
