DeVita, Ken Hillman, Rinaldo Bellomo, 2007-07-03 Why Critical Care Evolved METs In early 2004 when Dr Michael DeVita informed me that he was considering a textbook on the new concept of Medical Emergency Teams METs I was surprised At Presbyterian University Hospital in Pittsburgh we introduced this idea some 15 years ago but did not think it was revolutionary enough to publish This even though our fellows in critical care medicine training were all involved and informed about the importance of Condition C Crisis as it was called to distinguish it from Condition A Arrest We thought it absurd to intervene only after cardiac arrest had occurred because most cases showed prior deterioration and cardiac arrest could be prevented with rapid team work to correct precluding problems The above thoughts were logical in Pittsburgh where the legendary Dr Peter Safar had been working since the late 1950s on improving current resuscitation techniques first ventilation victims of apneic from drowning treatment of smoke inhalation and so on This was followed by external cardiac compression upon demonstration of its efficiency in cases of unexpected sudden cardiac arrest Dr Safar devoted his entire professional life to improvement of cardiopulmonary resuscitation He and many others emphasized the importance of getting the CPR team to the hospital victims of cardiac arrest as quickly as possible

Wheeler, Hector R.

Wong, Thomas P. Shanley, 2008-12-03 The field of critical care medicine is in the midst of a dramatic change Technological and scientific advances during the last decade have resulted in a fundamental change in the way we view disease processes such as sepsis shock acute lung injury and traumatic brain injury Pediatric intensivists have been both witness to and active participants in bringing about these changes As the understanding of the pathogenesis of these diseases reaches the cellular and molecular levels the gap between critical care medicine and molecular biology will disappear It is imperative that all physicians caring for critically ill children in this new era have a thorough understanding of the applicability of molecular biology to the care of these patients at the bedside in order to keep up with the rapidly evolving field of critical care medicine

To the same extent the practice of critical care medicine is in the midst of fundamental change. In keeping with the Institute of Medicine's report *Crossing the Quality Chasm*, the care of critically ill and injured children needs to be safe, evidence based, equitable, efficient, timely, and family centered.^{1,2} In the following pages these changes in our specialty are discussed in greater scope and detail, offering the reader fresh insight into not only where we came from but also where we are going as a specialty.

Textbook of Rapid Response Systems Michael A. DeVita, Ken Hillman, Rinaldo Bellomo, 2010-12-10 Successor to the editors' groundbreaking book on medical emergency teams, *Textbook of Rapid Response Systems* addresses the problem of patient safety and quality of care, the logistics of creating an RRS, resource allocation, process design, workflow, and training, the implementation of an RRS, organizational issues, challenges, and the evaluation of program results. Based on successful RRS models that have resulted in reduced in-hospital cardiac arrest and overall hospital death rates, this book is a practical guide for physicians, hospital administrators, and other healthcare professionals who wish to initiate an RRS program within their own institutions.

Simulation Scenarios for Nurse Educators Suzanne Hetzel Campbell, Karen Daley, 2008-12-03 Designated a Doody's Core Title. Once you begin to read the book, you will not be able to put it down. An excellent guide for nursing faculty just getting started with simulations or faculty who are already using this pedagogy. Pamela R. Jeffries, DNS, RN, FAAN, ANEF, Associate Dean, Indiana University School of Nursing. Computerized patient simulation is an exciting and innovative pedagogical method that allows nurse educators to prepare student nurses for the challenges of clinical practice. This book serves as a step-by-step guide to designing and developing simulated scenarios and integrating them into nursing curriculums. The authors provide concrete information about the use of simulation in a variety of programs, courses, and schools, with flexible simulator uses including live actors and static mannequins. This book also provides options for building a learning resource center and offers guidance on faculty development. Additionally, the contributors present 17 exemplars of actual scenarios in multiple clinical areas, as well as testimonies of practicing faculty.

Key Features: Numerous checklists including health communication checklists, evaluation criteria checklists to assess student performance, and debriefing guidelines. Forms to enhance the realism of the scenario, such as patient data forms, patient medication forms, and assessment tools. Suggested readings, lists of skills necessary for scenario enactment, and websites for further research. This book will encourage the development of critical thinking, reasoning, and judgment, and help to create a new generation of caring, competent, and confident practitioners.

Perinatal and Pediatric Respiratory Care Sherry L. Barnhart, Michael P. Czervinske, 1995 This text covers the neonatal and pediatric patient in a single work by a group of nationally recognized contributors from a wide variety of specialties including respiratory care, pulmonology, cardiology, etc. It is comprehensive enough to serve as both a textbook and a reference source. It emphasizes competency in clinical and technical skills and includes coverage of pediatric intensive care. An instructor's manual, clinical handbook, workbook, and slide set are available.
