The Philosophy, Politics and Economics of Finance in the 21st Century Patrick

O'Sullivan, Nigel Allington, Mark Esposito, 2015-04-10 Since 2008 the financial sector has been the subject of extensive criticism. Much of this criticism has focused on the morality of the actors involved in the crisis and its extended aftermath. This book analyses the key moral and political philosophical issues of the crisis and relates them to the political economy of finance. It also examines to what extent the financial sector can or should be reformed. This book is unified by the view that the financial sector had been a self-serving and self-regulating elite consumed by greed, speculation and even lawlessness with little sense of responsibility to the wider society or common good. In light of critical analysis by authors from a variety of backgrounds and persuasions, suggestions for reform and improvement are proposed in some cases radical reform. By placing the world of finance under a microscope, this book analyses the assumptions that have led from hubris to disgrace as it provides suggestions for an improved society. Rooted in philosophical reflection, this book invites a critical reassessment of finance and its societal role in the 21st century. This book will be of interest to academics, politicians, central bankers and financial regulators who wish to improve the morality of finance.

Crypto Asset Investing in the Age of Autonomy Jake Ryan, 2020-12-03 Competition, the drive for efficiency and continuous improvement ultimately push businesses toward automation and later towards autonomy. If a business can operate without human intervention, it will minimize its operational cost. If Uber can remove the expense of a driver with an autonomous vehicle, it will provide its service cheaper than a competitor who can't. If an artificially intelligent trading company can search, find and take advantage of some arbitrage opportunity, then it can profit where its competitors cannot. A business that can analyze and execute in real

time without needing to wait for a human to act is a business that will be able to take advantage of brief inefficiencies from other markets or businesses This trend following a thesis that is based on 100 years of proven economic theory Short wave economic cycles those 5 to 10 year cycles are driven by credit but the long wave economic cycles those 50 to 60 year cycles are driven by technological revolution We've had 5 cycles over the past 200 years with the last wave the Age of Information Telecommunications We've seen evidence that a new cycle has begun Technological revolutions come by way of a cluster of new innovations About a decade ago you started to see AI robotics and IoT sensors delivering on automation That's been powerful but not transformational It does not force businesses to fundamentally change how they do business The last piece of the puzzle was cryptocurrency because it allows us to process and transfer economic value without human intervention Soon there will be a global race to build autonomous operations Businesses and organizations without autonomous operations simply will not be able to compete with those that do because autonomy is the ultimate competitive advantage Crypto is the mechanism that will accrue value from being the infrastructure for the next digital financial revolution Crypto Asset Investing lays out a case that we've begun a new technological revolution similar to the Internet Age of the 1990's Artificial intelligence the Internet of Things robotics and cryptocurrency are converging to deliver on a new age what I call the Age of Autonomy Understanding the transformation that's taken place before anyone else can yield enormous investment opportunity In this book you'll learn how and why to invest in crypto assets
