Climate Change 2021 - The Physical Science Basis Intergovernmental Panel on Climate Change (IPCC), 2023-07-26
The Working Group I contribution to the Sixth Assessment Report of the Intergovernmental Panel on Climate Change IPCC provides a comprehensive assessment of the physical science basis of climate change. It considers in situ and remote observations, paleoclimate information, understanding of climate drivers and physical, chemical, and biological processes and feedbacks, global and regional climate modelling, advances in methods of analyses, and insights from climate services. It assesses the current state of the climate, human influence on climate in all regions, future climate change, including sea level rise, global warming effects, including extremes, climate information for risk assessment, and regional adaptation, limiting climate change by reaching net zero carbon dioxide emissions, and reducing other greenhouse gas emissions, and benefits for air quality. The report serves policymakers, decision makers, stakeholders, and all interested parties with the latest policy relevant information on climate change. Available as Open Access on Cambridge Core.

Innovating STEM Education: Increased Engagement and Best Practices Eugenia Koleza, Christos Panagiotakopoulos, Constantine Skordoulis, 2022-09-15
In recent years, there has been a focus on promoting the uptake of STEM subjects in schools. This has been driven by the need to ensure that young people gain the knowledge and skills essential to help them participate in a society in which mathematics, science, and technology are increasingly important. Nevertheless, reform efforts, including curriculum development, have treated the STEM subjects mostly in isolation. Recognizing that efforts for education within each individual STEM discipline would encourage a wide range of conversations about different important aspects of teaching and learning, this conference considered the potential benefits and challenges for the integration of various STEM's characteristics into education. In order to prepare students to address the problems of our society, it is necessary to provide them with opportunities to understand these problems through rich, engaging, and powerful experiences that integrate the disciplines of STEM. This volume contains selected papers presented at the Hellenic Conferences Innovating STEM Education HiSTEM 2016 and 2018, organized by the Postgraduate Program Interdisciplinary Approach on Science, Technology, Engineering, and Mathematics in Education (STEM Education), stemeducation.upatras.gr. The first eleven papers were presented at the HiSTEM 2016 Conference, and the last six papers at the HiSTEM 2018 Conference. These papers were selected after a peer review process from the conferences' submitted papers. The conferences provided a platform for dissemination of best practices in teaching and learning STEM in Greece and also inspired and empowered STEM educators to improve teaching quality, to increase engagement in STEM education, and career pathways to connect students with real life, industry relevancy, and to drive creativity, inquiry-based learning, problem solving, and project-based learning.

Forensic Justice Beulah Shekhar, Purvi Pokhariyal, 2024-03-18
Forensic science is playing an increasingly important role in criminal investigations as it provides scientific methods and techniques to gather and analyse evidence from crime scenes. Forensic

evidence can be crucial in identifying suspects linking them to the crime scene and helping to secure convictions in court. In this sense forensic science is seen as an aid to criminal investigation providing reliable and objective evidence that can be used to uncover the truth behind criminal activities. The integration of forensic science with law and criminology is creating a new era of progressive thinking where advanced techniques are being developed to better understand the nature of crime and the behaviour of criminals. With the help of forensic science investigators can obtain speedy justice and bring criminals to book. However this requires appropriate measures to be taken for the efficient execution of forensic investigations including the use of modern technology and the training of professionals in the latest forensic techniques. Given the importance of forensic science in the criminal justice system it is essential to have a comprehensive understanding of its different aspects. This includes the collection, preservation and analysis of forensic evidence as well as the interpretation of this evidence in the context of criminal investigations. This book covers these topics in detail providing valuable insights for professionals, practitioners, academics and students of the related fields.

Climate Change Impacts on Fisheries and Aquaculture, 2 Volumes Bruce F. Phillips, Mónica Pérez-Ramírez, 2017-11-13. The first comprehensive review of the current and future effects of climate change on the world's fisheries and aquaculture operations. The first book of its kind. Climate Change Impacts on Fisheries and Aquaculture explores the impacts of climate change on global fisheries resources and on marine aquaculture. It also offers expert suggestions on possible adaptations to reduce those impacts. The world's climate is changing more rapidly than scientists had envisioned just a few years ago and the potential impact of climate change on world food production is quite alarming. Nowhere is the sense of alarm more keenly felt than among those who study the warming of the world's oceans. Evidence of the dire effects of climate change on fisheries and fish farming has now mounted to such an extent that the need for a book such as this has become urgent. A landmark publication devoted exclusively to how climate change is affecting and is likely to affect commercially vital fisheries and aquaculture operations globally. Climate Change Impacts on Fisheries and Aquaculture provides scientists and fishery managers with a summary of and reference point for information on the subject which has been gathered thus far. Covers an array of critical topics and assesses reviews of climate change impacts on fisheries and aquaculture from many countries including Japan, Mexico, South Africa, Australia, Chile, US, UK, New Zealand, Pacific Islands, India and others. Features chapters on the effects of climate change on pelagic species, cod, lobsters, plankton, macroalgae, seagrasses and coral reefs. Reviews the spread of diseases, economic and social impacts, marine aquaculture and adaptation in aquaculture under climate change. Includes special reports on the Antarctic Ocean, the Caribbean Sea, the Arctic Ocean and the Mediterranean Sea. Extensive references throughout the book make this volume both a comprehensive text for general study and a reference guide to further research for fisheries scientists, fisheries managers, aquaculture personnel, climate change specialists, aquatic invertebrate and vertebrate biologists, physiologists, marine biologists, economists, environmentalist biologists and planners.
