Assessing Computational Thinking David Weintrop,Daisy W. Rutstein,Marie Bienkowski,Steven McGee,2023-09-12 This book presents different approaches for answering the question How do we assess computational thinking The result is a snapshot of the current state of the field for assessing computational thinking The last decade has seen rapid growth in the presence of computational thinking CT in educational contexts Those working to advance CT argue that the concepts and skills associated with CT are essential to succeed in an increasingly computational world As a result of these efforts there has been tremendous growth in curricula learning environments and innovations around CT education in K 12 classrooms and beyond As CT grows in prominence so too does the need to be able to effectively and equitably assess learners CT abilities This volume is a collection of chapters pursuing different approaches for answering the question How do we assess computational thinking The answers provided span age ranges formal and informal contexts conceptual aspects of CT and varying methodological and evaluative strategies Collectively the volume captures the current state of the field for assessing computational thinking and lays the groundwork for future CT assessment innovation Assessing Computational Thinking will be a key resource for academics researchers and advanced students of Education Educational Assessment Educational

Research Psychology and Research Methods The chapters included in this book were originally published as a special issue of Computer Science Education Associations between Reading and Mathematics: Genetic, Brain Imaging, Cognitive and Educational Perspectives Sarit Ashkenazi, Orly Rubinsten, Bert De Smedt, 2017-10-05

Converging evidence demonstrates a strong link between reading and mathematics multiple cognitive processes are shared between reading and mathematics including the representation and retrieval of symbolic information attention working memory and cognitive control Additionally multiple brain networks are involved in both math and reading and last common genetic factors might influence both reading and math Hence it comes as no surprise that there are meaningful associations between aspects of math and reading abilities Moreover comorbidity rates between math learning disabilities MD and reading disabilities RD are high up to 66% and prevalence rate of the comorbid condition is reported to be more common than the prevalence rate of isolated math learning disabilities Accordingly the goal of the research topic is to explore the underline mechanisms of this overlap between reading and math The research topic aims to include the following topics Genetics it has been found that both RD and MD are based on genetic factors and run in families Moreover math problem solving shares significant genetic overlap with general cognitive ability and reading decoding whereas math fluency shares significant genetic overlap with reading fluency and general cognitive ability Hence this topic will explore the shared and unique genetic risk factors to RD and MD In addition to shared and unique genetic influence on reading and math Neural perspective converging evidence from both structural and multiple functional imaging studies involving a wide range of numerical tasks points to the intraparietal sulcus IPS as a core region that involve in quantity manipulation However several additional brain areas such as frontoparietal and temporoparietal areas were found to be involved in numerical tasks Individuals with MD show deficits in a distributed set of brain regions that include the IPS fusiform gyrus in posterior brain regions and pre frontal cortex regions Similarly converging evidence indicate that the left hemisphere regions centered in the fusiform gyrus temporoparietal cortex and pre frontal cortex regions are strongly involve in typical reading and present lower activity connectivity or abnormal structure in RD Thus there is a meaningful neural overlap between reading and math Hence the authors can submit empirical studies on the role of several of brain regions that are involved in math and reading commonality and diversity both in the typical and a typical development Cognitive factors that play role in mathematics and reading and comorbidity between RD and MD There is a long lasting debate whether MD and RD originate from unique cognitive mechanisms or not Multiple cognitive processes are shared between reading and mathematics Therefore impairments in any one of domain general skills could conceivably play an important role in both pure and comorbid conditions Moreover it has been suggested that phonological processing has a significant role in some aspects of numerical processing such as retrieval of arithmetical facts Education it will be interesting to look at the effect of interventions that aim to improve reading such as phonological awareness and there transfer effect on improving mathematical processing Alternatively it will be good to test whether math interventions will
