Quantitative Assessment and Validation of Network Inference Methods in Bioinformatics Benjamin Haiibe-Kains, Frank Emmert-Streib, 2015-04-14 Scientists today have access to an unprecedented arsenal of high tech tools that can be used to thoroughly characterize biological systems of interest High throughput omics technologies enable to generate enormous quantities of data at the DNA RNA epigenetic and proteomic levels One of the major challenges of the post genomic era is to extract functional information by integrating such heterogeneous high throughput genomic data This is not a trivial task as we are increasingly coming to understand that it is not individual genes but rather biological pathways and networks that drive an organism's response to environmental factors and the development of its particular phenotype In order to fully understand the way in which these networks interact or fail to do so in specific states disease for instance we must learn both the structure of the underlying networks and the rules that govern their behavior In recent years there has been an increasing interest in methods that aim to infer biological networks These methods enable the opportunity for better understanding the interactions between genomic features and the overall structure and behavior of the underlying networks So far such network models have been mainly used to identify and validate new interactions between genes of interest But ultimately one could use these networks to predict large scale effects of perturbations such as treatment by multiple targeted drugs However currently we are still at an early stage of comprehending methods and approaches providing a robust statistical framework to quantitatively assess the quality of network inference and its predictive potential The scope of this Research Topic in Bioinformatics and Computational Biology aims at addressing these issues by investigating the various complementary approaches to quantify the quality of network models These validation techniques could focus on assessing quality of specific interactions global and local structures and predictive ability of network models These methods could rely exclusively on in silico evaluation procedures or they could be coupled with novel experimental designs to generate the biological data necessary to properly validate inferred networks

Art Conservation W. (Bill) Wei, 2021-07-14 Conservators and other museum professionals face a large number of issues involving the mechanical behavior of materials including questions on craquelure restoring physically damaged objects art in transport or the selection of adhesives However science in conservation and museum studies curricula focusses mostly on chemistry This book fills this important gap in conservation training It is the first such book written specifically for the conservation community and professionals with little or no background in mechanical engineering It introduces the basics of mechanical properties and behavior of materials and objects with examples and exercises based on conservation practice More complex issues of mechanical loading and advanced solutions are also introduced

Bacterial pathogens in the non-clinical environment Sebastien P. Faucher, Steve J. Charette, 2015-06-18 The transmission route used by many bacterial pathogens of clinical importance includes a step outside the host thereafter refer to as the non clinical environment NCE Obvious examples include foodborne and waterborne

pathogens and also pathogens that are transmitted by hands or aerosols In the NCE pathogens have to cope with the presence of toxic compounds sub optimal temperature starvation presence of competitors and predators Adaptation of bacterial pathogens to such stresses affects their interaction with the host This Research Topic presents important concept to understand the life of bacterial pathogens in the NCE and provides the reader with an overview of the strategies used by bacterial pathogens to survive and replicate outside the host

Pathophysiological Mechanisms of Sarcopenia in Aging and in Muscular Dystrophy: A Translational Approach Luciano Merlini, Paolo Bonaldo, Emanuele Marzetti, 2016-01-18

Loss of muscle mass and increased fibrosis characterize both sarcopenia of aging and muscular dystrophy Research is increasingly showing that these two conditions also share several pathophysiological mechanisms including mitochondrial dysfunction increased apoptosis abnormal modulation of autophagy decline in satellite cells increased generation of reactive oxygen species and abnormal regulation of signaling and stress response pathways This Research Topic will cover several mechanisms involved in aging and dystrophic sarcopenia and explore the therapeutic potential of various strategies for intervention

The Coevolution of IDO1 and AhR in the Emergence of Regulatory T Cells in Mammals Ursula Grohmann, Paolo Puccetti, 2016-01-28 Indoleamine 2,3-dioxygenase IDO1 is an ancestral enzyme that initially confined to the regulation of tryptophan availability in local tissue microenvironments is now considered to play a wider role that extends to homeostasis and plasticity of the immune system Thus IDO biology has implications for many aspects of immunopathology including viral infections neoplasia autoimmunity and chronic inflammation Its immunoregulatory effects are mainly mediated by dendritic cells DCs and involve not only tryptophan deprivation but also production of kynurenines that act on IDO DCs thus rendering an otherwise stimulatory DC capable of regulatory effects as well as on T cells The aryl hydrocarbon receptor AhR is a ligand operated transcription factor originally recognized as the effector mediating the pathologic effects of dioxins and other pollutants However it is now well established that AhR activation by endogenous ligands can produce immunoregulatory effects The IDO1 mechanism appears to have been selected through phylogenesis primarily to prevent overreacting responses to TLR recognized pathogen associated molecular patterns and only later did it become involved in the response to T cell receptor recognized antigens As a result in mammals IDO1 has become pivotal in fetomaternal tolerance at a time when regulatory T cells emerged to meet the same need namely protecting the fetus IDO1 and regulatory T Treg cells may have then coevolved to broaden their function well beyond their initial task of protecting the fetus such that in acquired immunity IDO1 with its dual enzymic and signaling function has turned into an important component of the peripheral generation and effector function of regulatory T cells AhR in turn which has a role in regulatory T cell generation is presumed to have evolved from invertebrates where it served a ligand independent role in normal development processes Evolution of the receptor in vertebrates resulted in the ability to bind structurally different ligands including xenobiotics and

microbiota derived catabolites Considering the inability of invertebrate AhR homologs to bind dioxins the adaptive role of the AhR to act as a regulator of xenobiotic metabolizing enzymes may have been a vertebrate innovation to later acquire an additional immune regulatory role by coevolutionary pressure in mammals by IDO1 and regulatory T cells Thus an entirely new paradigm in immunology and more specifically in immune tolerance is the coevolution of three systems namely the IDO1 mechanism AhR driven gene transcription and T cell regulatory activity that originating from the initial need of protecting the fetus in mammals have later turned into a pivotal mechanism of peripheral tolerance in autoimmunity transplantation and neoplasia

Ocean Exchange and Circulation Miroslav Gacic ,Manuel Bensi,2020-12-10 The reduction of greenhouse gas emissions particularly from fossil fuel powered vehicles and airplanes by means of weight savings and leaner fuel consumption helps to restrain environmental impacts In general for a variety of industries and specifically in the case of transport where both weight savings and increased energy efficiency are pursued the use of metal polymer multi material structures has been growing at an increasing and particularly fast pace in recent years Several manufacturing techniques have been or are being developed with the aim of being used for producing dissimilar materials in cost efficient manners This book presents recent developments in the state of the art of advanced additive manufacturing and the joining of metal polymer multi material structures in transportation This publication mainly focuses on the correlations between microstructure manufacturing process i e AddJoining adhesive bonding friction riveting friction based staking and friction spot joining properties and the mechanical performance of metal polymer multi material structures

Programming Languages Norman Ramsey,2022-10-27 Computer scientists often need to learn new programming languages quickly The best way to prepare for this is to understand the foundational principles that underlie even the most complicated industrial languages This text for an undergraduate programming languages course distills great languages and their design principles down to easy to learn bridge languages implemented by interpreters whose key parts are explained in the text The book goes deep into the roots of both functional and object oriented programming and it shows how types and modules including generics polymorphism contribute to effective

programming The book is not just about programming languages it is also about programming Through concepts examples and more than 300 practice exercises that exploit the interpreter students learn not only what programming language features are but also how to do things with them Substantial implementation projects include Milner s type inference both copying and mark and sweep garbage collection and arithmetic on arbitrary precision integers **Insidious Capital** Don Kalb,2024-01-05 With a team of anthropologists and geographers Insidious Capital explores value and values in what may well be the last phase of capitalist globalization In a global perspective of fast transforming social spaces that move from East to West the book explores the struggles around the exploitation and valuation of labor environmental politics expansion of the ground rent new hierarchies the contradictions of higher education the offshoring of immaterial labor the illiberal right and the mobilizations against it This is a book about the variegated frontlines of value within an uneven but not random geography of capitalist expansion Real-time Digital Signal Processing for Software-defined Optical Transmitters and Receivers Schmogrow, Rene Marcel,2014-11-21 A software defined optical Tx is designed and demonstrated generating signals with various formats and pulse shapes in real time Special pulse shapes such as OFDM or Nyquist signaling were utilized resulting in a highly efficient usage of the available fiber channel bandwidth This was achieved by parallel data processing with high end FPGAs Furthermore highly efficient Rx algorithms for carrier and timing recovery as well as for polarization demultiplexing were developed and investigated **Principles of Distributed Systems** Marcos K.
