Handbook of the Changing Nature of Work Brian J. Hoffman, Mindy K. Shoss, Lauren A. Wegman, 2020-04-23 This handbook provides an overview of the research on the changing nature of work and workers by marshalling interdisciplinary research to summarize the empirical evidence and provide documentation of what has actually changed. Connections are explored between the changing nature of work and macro level trends in technological change, income inequality, global labor markets, labor unions, organizational forms, and skill polarization among others. This edited volume also reviews evidence for changes in workers including generational change or lack thereof that has accumulated across domains. Based on documented changes in work and worker behavior, the handbook derives implications for a range of management functions such as selection, performance management, leadership, workplace ethics, and employee well-being. This evaluation of the extent of changes and their impact gives guidance on what best practices should be put in place to harness these developments to achieve success. **ECCWS 2017 16th European Conference on Cyber Warfare and Security** Academic Conferences and Publishing Limited, 2017

British Army Veterans' Experiences of the Transition into Civilian Life Emma Armstrong, 2025-02-04 Over the last few decades, the academic and public gaze has increasingly focused on military veterans. The extant literature has documented a wealth of problems that emerge once a service leaver enters civilian life, including homelessness, mental health issues, criminality, and substance misuse. Accordingly, the intention to improve the wellbeing of veterans in the UK has certainly been evident within various government-initiated strategies. However, most scholarly attention has concentrated on the few veterans who encounter these extreme transitions. This book sheds light on the vast majority who are deemed to have an unproblematic transition on account of their employment status and lack of serious social or health issues by drawing on data from 58 interviews with Army veterans, spouses of Army veterans, and charity workers. By mapping participants' trajectory from pre-military life to years after service, a holistic theorisation of the transition is provided using the tenets of ultra-realism. It shows that for most, merely being in employment was not an accurate measure of success. Instead, entrance to the civilian job market was characterised by precarity and intense competition between employees. This served as a dichotomy to the work environment veterans were familiar with and caused tension between the subject and the ideology they were assimilated to. In putting forward this argument, this book advances the existing ultra-realist theoretical framework and veteran research in an empirically informed manner. *BRICS and Global Governance*

John Kirton, Marina Larionova, 2018-02-13 The past few decades have witnessed the development of an increasingly globalised and multipolar world order in which the demand for multilateralism becomes ever more pronounced. The BRICS group, established in 2009, has evolved into a plurilateral summit institution recognized both by sceptics and proponents as a major participant in the international system. Addressing the BRICS's role in global governance, this book critically examines the club's birth and evolution, mechanisms of inter-BRICS cooperation, its agenda, priorities, BRICS countries' interests, decisions made by members, their collective and individual compliance with the agreed commitments, and the patterns of

BRICS engagement with other international institutions This volume advances the current state of knowledge on global governance architecture the BRICS role in this system and the benefits it has provided and can provide for world order This book will interest scholars and graduate students who are researching the rise and role of emerging powers global governance China and India s approach to global order and relationship with the United States Great Power politics democratization as a foreign policy strategy realist theory building and hegemonic transitions and the crisis of liberal world order

Great Power Cyber Competition David V. Gioe, Margaret W. Smith, 2024-02-20 This volume conceptualizes the threats challenges opportunities and boundaries of great power cyber competition of the 21st century This book focuses on a key dimension of contemporary great power competition that is often less understood due to its intangible character the competition taking place in the cyber domain including information and cyber operations Democracies across the globe find themselves in an unrelenting competition with peer and near peer competitors with a

prevailing notion that no state is safe from the informational contest Adversarial powers particularly China and Russia recognize that most competition is principally non kinetic but dominates the information environment and cyberspace and the volume articulates the Russian and Chinese strategies to elevate cyber and information competition to a central position Western governments and in particular the U S government have long conceived of a war peace duality but that perspective is giving way to a more nuanced perception of competition This volume goes beyond analyzing the problems prevalent in the information space and offers a roadmap for Western powers to compete in and protect the global information environment from malicious actors Its genesis is rooted in the proposition that it is time for the West to push back against aggression and that it needs a relevant framework and tools to do so The book demonstrates that Western democratic states currently lack both the strategic and intellectual acumen to compete and win in the information and cyber domains and argues that the West needs a strategy to compete with near peer powers in information and cyber warfare This book will be of much interest to students of cyber warfare information warfare defense studies and international relations in general as well as practitioners
