Driving Lessons J. Peter Rothe, 2002-09-20 With the exception of modern warfare no other human activity has destroyed as many lives as driving a motor vehicle Traffic crashes kill and injure thousands of Canadians every year at an incalculable financial and emotional cost to society but rather than rush to stem this tide of human carnage policy makers seem to accept the ghastly toll as the price we pay for mobility Driving Lessons takes a fresh look at the complexities of the road transportation system in depth going far beyond the symptomatic linear reductionist approach It challenges current traffic safety paradigms that simply blame the driver or target villains and scapegoats like impaired or high risk drivers It takes issue with road transportation system management that sometimes puts mobility ahead of the safety of road users As one researcher notes human beings will make mistakes and accordingly the road transportation system must be designed so that people's mistakes do not have disastrous consequences

However, most textbooks on highway engineering are based on experience from industrialized countries with temperate climates and deal only with specific problems. *Road Engineering for Development*, published as *Highway and Traffic Engineering in Developing Countries* in its first edition, provides a comprehensive description of the planning, design, construction, and maintenance of roads in developing countries. It covers a wide range of technical and non-technical problems that may confront road engineers working in this area. The technical content of the book has been fully updated, and current development issues are focused on. Designed as a fundamental text for civil engineering students, this book also offers a broad practical view of the subject for practising engineers. It has been written with the assistance of a number of world-renowned specialist professional engineers.
