

# Protein Structure

What are the levels of protein structure and what role do functional groups play?

## Why?

Proteins accomplish many cellular tasks such as facilitating chemical reactions, providing structure, and carrying information from one cell to another. How a protein chain coils up and folds determines its three-dimensional shape. Its shape will, in turn, determine how it interacts with other molecules and thus performs its function in the cell.

## Model 1 – Formation of a Peptide Bond

1. Examine the amino acids in Model 1.
  - a. Circle an amine group in the diagram.
  - b. Draw a triangle around a carboxylic acid (carboxyl) group.
2. How are the amino acids similar to one another?

The amino acids all have a N-C-C backbone and an amino and carboxyl group.

3. How are the amino acids different from one another?

Their R-groups are different from one another.

volume Protein Structure A Practical Approach also edited by Thomas Creighton provides the methods necessary for the study of protein structure. The Physical Foundation of Protein Architecture Nobuhiko Saito, Yukio Kobayashi, 2001 A protein requires its own three dimensional structure for its biological activity. If a chemical agent is added the biological activity is lost and the three dimensional structure is destroyed to become a random coil state. But when the chemical agent is removed the biological activity is recovered implying that the random coil state turns back into the original complex structure spontaneously. This is an astonishing event. The Physical Foundation of Protein Architecture is intended to solve this mystery from the physicochemical basis by elucidating the mechanism of various processes in protein folding. The main features of protein folding are shown to be described by the island model with long range hydrophobic interaction which is capable of finding the specific residue and the lampshade criterion for disulfide bonding. Various proteins with known structure are refolded with the purpose of uncovering the mechanism of protein folding. In addition ab initio method for predicting protein structure from its amino acid sequence is proposed.
