

- c. Is this scenario an example of positive or negative feedback? Justify your reasoning using the words "stimulus" and "response."
- This is an example of negative feedback because the response is responsible for stopping the stimulus, or stopping the puppy from urinating on the couch.
6. Which of the feedback mechanisms in Model 1 would be most useful for amplifying a condition that is advantageous for the organism?
- The positive feedback mechanism would be the best option for amplifying the condition that is advantageous for the organism. This is due to the fact that a positive feedback will have a response that triggers the stimulus.
7. Which of the feedback mechanisms in Model 1 would be most useful for stopping a condition that is detrimental or limiting a condition to specified levels?
- Here it would be the contrary, a negative feedback mechanism. This is because it will stop or decrease the stimulus to specified levels.
8. Examine Model 2. Based on what you see in the model, propose a definition for "thermoregulation."
- Thermoregulation is when the body regulates its own temperature.
9. According to Model 2, what portion of the brain contains sensors that monitor body temperature?
- According to model 2, the hypothalamus is the part of the brain that contains sensors for monitoring the body temperature.
10. According to Model 2:
- What are two mechanisms the body uses to cool itself?
 - The two mechanisms that the body uses to cool itself is to first increase the sweat production; the blood vessels to the skin and that way the blood moves towards the skin and is able to lose heat outside the body.
 - What are two mechanisms the body uses to heat itself?
 - For the body to heat itself it generates shivers, this is through a muscle contraction. It also makes the blood move away from the skin and holds it inside of the body, generating the body a reaction of less heat radiated from the surface.
11. Consider the feedback loop that cools the body when it is too warm.
- Identify the "stimulus" and "response" in the feedback loop.
 - Stimulus: the temperature that is rising
 - Response: the sweating or the blood going towards the skin
 - Is this feedback loop positive or negative feedback? Justify your reasoning.
 - This is an example of negative feedback, because the stimulus is stopped as a consequence of the response
12. Consider the feedback loop that heats the body when it is too cold.
- Identify the "stimulus" and "response" in the feedback loop.
 - Stimulus: decreasing temperature
 - Response: shivering or the blood going away from the skin

Feedback Loops Third Edition Positive Feedback in Natural Systems Donald L. DeAngelis,Wilfried M. Post,Curtis C. Travis,2012-12-06 Cybernetics a science concerned with understanding how systems are regulated has reflected the preoccupations of the century in which it was born Regulation is important in twentieth century society where both machines and social organizations are complex Cybernetics focused on and became primarily associated with the homeostasis or stability of system behavior and with the negative feedbacks that stabilize systems It paid less attention to the processes opposite to negative feedback the positive feedback processes that act to change systems We attempt to redress the balance here by illustrating the enormous importance of positive feedbacks in natural systems In an article in the American Scientist in 1963 Maruyama called for increased attention to this topic noting that processes of change could occur when a deviation in anyone component of the system caused deviations in other components that acted back on the first component to reinforce or amplify the initial deviation The deviation amplification is the result of positive feedback among system components Maruyama demonstrated by numerous examples that the neglect of such processes was unjustified and suggested that a new branch of cybernetics the second cybernetics be devoted to their study **Feedback Systems** Karl Johan Åström,Richard Murray,2021-02-02 This book provides an introduction to the mathematics needed to model analyze and design feedback systems It is an ideal textbook for undergraduate and graduate students and is indispensable for researchers seeking a self contained reference on control theory Unlike most books on the subject Feedback Systems develops transfer functions through the exponential response of a system and is accessible across a range of disciplines that utilize feedback in physical biological information and economic systems Karl str m and Richard Murray use techniques from physics computer science Feedback Systems Emery Air Frieght.
