*Critical Infrastructure Protection: Advanced Technologies for Crisis Prevention and Response* Tünde Anna Kovács, Igor Fürstner, 2025-06-13 This book presents the latest research findings from experts in critical infrastructure protection and management It explores various aspects of both cyber and physical attack scenarios focusing on crisis management and response strategies A significant portion of the work addresses how different critical infrastructure sectors can withstand and recover from attacks with an emphasis on practical solutions and real world applications Several chapters also delve into the human element of crisis management highlighting the psychological and organizational challenges faced during emergencies The book demonstrates how human decision making behaviour and coordination play pivotal roles in the effectiveness of response efforts One of the emerging topics in critical infrastructure protection discussed in the book is using Unmanned Aerial Vehicles UAVs in firefighting and other accident related crisis situations This innovative technology is shown to enhance emergency response capabilities offering new ways to monitor assess and manage crises from a distance Additionally the research includes detailed analyses of ballistic and blast effects offering insights into how these physical threats can impact infrastructure and how to mitigate their effects The book combines cutting edge research with practical insights providing a comprehensive overview of the current trends and challenges in protecting critical infrastructures from a wide range of threats This book also addresses the evolving role of humans in modern warfare particularly in the context of increasing reliance on artificial intelligence As AI technologies reshape military strategies they emphasize the need to balance automation with human oversight ensuring that human security remains central to decision making processes in complex and high stakes environments *Evidence-Based Applied Sport Psychology* Roland A. Carlstedt, 2012-11-13 Print CourseSmart **Routledge Handbook of Smart Built Environment** Weisheng Lu, Chimay J. Anumba, 2025-03-20 The primary aim of this edited volume is to document the current theories best practices and technological advancements in the move towards a Smart Built Environment SBE The needs to accelerate towards the SBE are numerous and include Increasing complexities and the need for interconnectivity within the built environment e g mega infrastructure projects Data driven decision making resulting in higher demand from clients e g smart design construction operation and end of life EOL High requirements from stakeholders e g system efficiency environmental performance green procurement Fast paced technological advancement and integration Natural disaster resilience of the built environment e g prediction smart control of building component Sustainability issues around the built environment In this book the interrelationships among the various lifecycle stages design construction operation and EOL the collective benefit of synergy at building level multi infrastructure level and city level as well as the ultimate goals in relation to the deployment of smart technologies in the industry are addressed Part I covers smart design and construction Part II smart living and operation and Part III broadens the scope to the whole smart city Chapters examine How smart technologies can improve the effectiveness productivity and

efficiency of the built environment An overview of theories and practices that are enabled by innovations and technologies for developing the SBE The basis for new research agenda new concepts and frameworks for future development This handbook documents the current theories practices and technologies and develops a holistic approach for research and practice by adopting a multidimensional outlook for the SBE It is an essential reference work for all built environment stakeholders from academia through to the professions

Affect in Sports, Physical Activity and Physical Education Darko Jekauc,Martina K. Kanning,Ingo Wagner,Claudio R. Nigg,Ryan E. Rhodes,David M. Williams,2022-01-06 *Heart Rate Variability, Health and Well-being: A Systems Perspective* Robert Drury,J. P. Ginsberg,Stephen W. Porges,Julian F. Thayer,2020-01-09 The development of a new tool analytic device or approach frequently facilitates rapid growth in scientific understanding although the process is seldom linear The study of heart rate variability HRV defined as the extent to which beat to beat variation in heart rate varies is a rapidly maturing paradigm that integrates health and wellness observations across a wide variety of biomedical and psychosocial phenomena and illustrates this nonlinear path of development The utility of HRV as an analytic and interventive technique goes far beyond its original application as a robust predictor of sudden cardiac death This Research Topic aims to provide a conceptual framework to use in exploring the utility of HRV as a robust parameter of health status using a broad and inclusive definition of health and well being From the broadest perspective current biomedical science emerged from shamanistic and religious healing practices and empirically observed

interventions made as humans emerged from other hominins The exponential growth of physics chemistry and biology provided scientific support for the model emphasizing pathology and disorders Even before the momentous discovery of germ theory sanitation and other preventive strategies brought about great declines in mortality and morbidity The revolution that is currently expanding the biomedical model is an integrative approach that includes the wide variety of non physio chemical factors that contribute to health In the integrative approach health is understood to be more than the absence of disease and emphasis is placed on optimal overall functioning within the ecological niche occupied by the organism This approach also includes not just interventive techniques and procedures but also those social and cultural structures that provide access to safe and effective caring for sufferers Beyond the typical drug and surgical interventions which many identify with the Western biomedical model that currently enjoys an unstable hegemony such factors also include cognitive behavioral social and cultural practices such as have been shown to be major contributors to the prevention and treatment of disease and the promotion of health and optimal functioning This Integrative Model of Health and Well being also derives additional conceptual power by recognizing the role played by evolutionary processes in which conserved adaptive human traits and response tendencies are not congruent with current industrial and postindustrial global environmental demands and characteristics This mismatch contributes to an increasing incidence of chronic conditions related to lifestyle and health behavior Such a comprehensive model will make possible a truly personalized approach to health and well being including and going far beyond the current emphasis on genomic analysis which has promised more than it has currently delivered HRV offers an inexpensive and easily obtained measure of neurovisceral functioning which has been found to relate to the occurrence and severity of numerous physical disease states as well as many cognitive behavioral health disorders This use of the term neurovisceral refers to the relationships between the nervous system and the viscera providing a more focused and specific conceptual alternative to the now nearly archaic mind body distinction This awareness has led to the recent and growing use of HRV as a health biomarker or health status measure of neurovisceral functioning It facilitates studying the complex two way interaction between the central nervous system and other key systems such as the cardiac gastroenterological pulmonary and immune systems The utility of HRV as a broad spectrum health indicator with possible application both clinically and to population health has only begun to be explored Interventions based on HRV have been demonstrated to be effective evidence based interventions with HRV biofeedback treatment for PTSD representing an empirically supported modality for this complex and highly visible affliction As an integral measure of stress HRV can be used to objectively assess the functioning of the central enteric and cardiac nervous systems all of which are largely mediated by the vagal nervous complex HRV has also been found to be a measure of central neurobiological concepts such as executive functioning and cognitive load The relatively simple and inexpensive acquisition of HRV data and its ease of network transmission and analysis make possible a promising digital epidemiology which can facilitate objective population

health studies as well as web based clinical applications An intriguing example is the use of HRV data obtained at motor vehicle crash sites in decision support regarding life flight evacuations to improve triage to critical care facilities This Research Topic critically addresses the issues of appropriate scientific and analytic methods to capture the concept of the Integrative Health and Well being Model The true nature of this approach can be appreciated only by using both traditional linear quantitative statistics and nonlinear systems dynamics metrics which tend to be qualitative The Research Topic also provides support for further development of new and robust methods for evaluating the safety and effectiveness of interventions and practices going beyond the sometimes tepid and misleading gold standard randomized controlled clinical trial

**Role of Physical Fitness on Cardiovascular Responses to Stress** Arto J Hautala, Anthony S Leicht, Daniel Boullosa, 2015-03-12 Cardiovascular responses to physical and/or mental stressors has been a topic of great interest for some time For example significant changes of cardiovascular control and reactivity have been highlighted as important mechanisms for the protective effect of exercise as a simple and effective non medical therapy for many pathologies However despite the great number of studies performed to date e g 54 000 entries in Pubmed for cardiovascular stress important questions of the role stress has on cardiovascular function still remain For instance What factors account for the different cardiovascular responses between mental and physical stressors How do these different components of the cardiovascular system interact during stress Which cardiovascular responses to stress are the most important for identifying normal depressed and enhanced cardiovascular function Can these stress induced responses assist with patient diagnosis and prognosis What impact does physical fitness have on the relationship between cardiovascular function and health The current topic examined our current understanding of cardiovascular responses to stress and the significant role that physical fitness has on these responses for improved function and health Manuscripts focusing on heart rate variability HRV heart rate recovery and other novel cardiovascular assessments were especially encouraged **Futsal Research and Challenges for**

Kondo, Matthew J. Barnes, 2020-07-22 **The Artificial Pancreas** Ricardo S. Sánchez-Peña, Daniel R. Chervinský, 2019-04-15 The Artificial Pancreas Current Situation and Future Directions presents research on the top issues relating to the artificial pancreas AP and its application to diabetes AP is a newer form of treatment to accurately and

efficiently inject insulin thereby significantly improving the patient's quality of life. By connecting a continuous glucose monitor (CGM) to a continuous subcutaneous insulin infusion using a control algorithm, AP delivers and regulates the most accurate amount of insulin to maintain normal glycemic values. Featured chapters in this book are written by world leaders in AP research, thus providing readers with the latest studies and results. Focuses on Type 1 Diabetes Mellitus (T1DM) that is primarily found in children and typically treated by means of a syringe or insulin pump. Features research and results from top academic experimental groups and from universities such as Harvard USA, the University of Virginia USA, the University of Padova Italy, the University of Montpellier France, and the Buenos Aires Institute of Technology Argentina. Discusses clinical trials of AP from around the world, including the United States, the EU, Latin America, and Israel.
