## RATIONAL and IRRATIONAL NUMBERS

Remember that an **Irrational Number** is a real number that **cannot** be written as a simple fraction.  
Some famous Irrational Numbers:

- 1.) Pi  $\pi$  - People have calculated Pi to over a quadrillion decimal places and still there is no pattern.  
The first few digits look like this: **3.14** (and more ...)
- 2.) Euler's Number  $e$  - People have also calculated  $e$  to lots of decimal places without any pattern showing.  
The first few digits look like this: **2.71** (and more ...)
- 3.) Many square roots, cube roots, etc are also irrational numbers.  
Examples:  $\sqrt{3} = 1.73$  (and more...)       $\sqrt{99} = 9.94$  (and more...)  
We use "... " to show that there are more numbers that would go on and on

**Directions: Sort the following numbers.**

**Brain and Mathematical Cognition** Xinlin Zhou,2024-08-01 This book intends to present a series of insights coming from in depth investigation of brain and mathematical cognition in Chinese population Specifically the book introduces research on the associations among number sense visual form perception and mathematical fluency symbolic and non symbolic mental number line and the role of spatial modeling and logical inference in mathematical problem solving The book summarizes author s previous studies on the involvement of semantic network other than visuospatial network in mathematical cognition The three component mathematical model that comes out of more than 10 years of research on mathematical cognition is introduced The book presents the effect of learning experience on arithmetic related brain system Chinese abacus that can be used to eradicate developmental dyscalculia in classroom is briefly discussed Special attention in

this book is paid to mathematical anxiety and mathematical learning disorders in Chinese schoolchildren Finally gender differences in mathematical cognition are also reviewed Interpreting NAEP Scales ,1993 *Who Is Rational?* Keith E. Stanovich,1999-04-01 Integrating a decade long program of empirical research with current cognitive theory this book demonstrates that psychological research has profound implications for current debates about what it means to be rational The author brings new evidence to bear on these issues by demonstrating that patterns of individual differences largely ignored in disputes about human rationality have strong implications for explanations of the gap between normative and descriptive models of human behavior Separate chapters show how patterns of individual differences have implications for all of the major critiques of purported demonstrations of human irrationality in the heuristics and biases literature In these critiques it has been posited that experimenters have observed performance errors rather than systematically irrational responses the tasks have required computational operations that exceed human cognitive capacity experimenters have applied the wrong normative model to the task and participants have misinterpreted the tasks In a comprehensive set of studies Stanovich demonstrates that gaps between normative and descriptive models of performance on some tasks can be accounted for by positing these alternative explanations but that not all discrepancies from normative models can be so explained Individual differences in rational thought can in part be predicted by psychological dispositions that are interpreted as characteristic biases in people s intentional level psychologies Presenting the most comprehensive examination of individual differences in the heuristics and biases literature that has yet been published experiments and theoretical insights in this volume contextualize the heuristics and biases literature exemplified in the work of various investigators

speaking with each other. The main article from one language area and the following discussion from the other language area together result in an extensive treatment of an action theoretic approach in the respective psychological area; thus both the main article and discussion should be read together. **Federal Probation**, 1981
