**Advanced Physicochemical Treatment Processes** Lawrence K. Wang, Yung-Tse Hung, Nazih K. Shammash, 2007-11-10 The past thirty years have witnessed a growing worldwide desire that positive actions be taken to restore and protect the environment from the degrading effects of all forms of pollution air water soil and noise Because pollution is a direct or indirect consequence of waste the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste However as long as waste continues to exist we can only attempt to abate the subsequent pollution by converting it to a less noxious form Three major questions usually arise when a particular type of pollution has been identified 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved This book is one of the volumes of the Handbook of Environmental Engineering series The principal intention of this series is to help readers formulate answers to the last two questions above The traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control However the realization of the ever increasing complexity and interrelated nature of current environmental problems renders it imperative that intelligent planning of pollution abatement systems be undertaken **Ninth International Conference on Water Pollution Research** S. H. Jenkins, 2013-10-02 Ninth International Conference on Water Pollution Research focuses on the methods measures and technologies involved in the treatment of wastewater including the treatment of sludges and pollutants in bodies of water The selection first offers information on carbon adsorption as an advanced wastewater treatment process nitrification of surface water and methods for measuring the thickenability of sludges Topics include factors that influence adsorption principle of biological nitrification and characterization of sludges The text also discusses the utilization of pulped newsprint as a conditioning aid in the vacuum filtration of a municipal sludge and the purification of pulp bleaching wastewater with aluminum oxide The publication reviews the properties and treatment of lime algae sludge concept of filterability prediction of bacterial pollution in sea water and the role of retained particles in deep

bed filtration The text also describes the immediate and continuous measurement of activated sludge quantity in sewage biological treatment tanks comparative assessment of pollution loadings from non point sources in urban land use and wastewater control technology in steam electric power plants The book is a vital reference for readers interested in water pollution research
