The Process of Human Evolution Grover S. Krantz, 1995

*The Skull of Australopithecus afarensis* William H. Kimbel, Yoel Rak, Donald C. Johanson, 2004-03-11 The book is the most in depth account of the fossil skull anatomy and evolutionary significance of the 3 6 3 0 million year old early human species Australopithecus afarensis Knowledge of this species is pivotal to understanding early human evolution because 1 the sample of fossil remains of A afarensis is among the most extensive for any early human species and the majority of remains are of taxonomically informative skulls and teeth 2 the wealth of material makes A afarensis an indispensable point of reference for the interpretation of other fossil discoveries 3 the species occupies a time period that is the focus of current research to determine when where and why the human lineage first diversified into separate contemporaneous lines of descent Upon publication of this book this species will be among the most thoroughly documented extinct ancestors of humankind The main focus of the book its organizing principle is the first complete skull of A afarensis specimen number A L 444 2 at the Hadar site Ethiopia the home of the remarkably complete 3 18 million year old skeleton known as Lucy found at Hadar by third author D Johanson in 1974 Lucy and other fossils from Hadar together with those from the site of Laetoli in Tanzania were controversially attributed to the then brand new species A afarensis by Johanson T White and Y Coppens in 1978 However a complete skull which would have quickly resolved much of the early debate over the species proved elusive until second author Y Rak s discovery of the 444 skull in 1992 The book details the comparative anatomy of the new skull and the cast of its brain analyzed by R Holloway and M Huan as well as of other skull and dental finds recovered during the latest ongoing field work at Hadar and analyzes the evolutionary significance of A afarensis in the context of other critically important discoveries of earliest humans made in recent years In essence it summarizes the state of knowledge about one of the central subjects of current paleoanthropological investigation

fossils to teach students about ten important milestones in human evolution from the appearance of the primates to the demise of the neanderthals Students can rotate over 30 fossil and modern skulls bones and artifacts viewing them from any angle Includes illustrated definitions of all technical terms **Human Evolution and Survival** Ellis E.

McDowell-Loudan, 2013-01-03 What does it mean to be human What is evolution How should we define survival These questions are at the heart of the anthology Human Evolution and Survival which introduces students to important concepts in anthropology The opening chapter shares student generated definitions of human evolution and survival These definitions set the tone for the rest of the book and establish boundaries for exploring concepts that touch on both science and philosophy Subsequent chapters explore a variety of topics including How scientific method is used to question test and re test data What to do when confronted with scientific error even one's own Nature vs Nurture Genetics vs Culture Pre hominids and controversies surrounding them The material is examined from several viewpoints What is the role of genetics and is our humanity inherent in our very cell structure How does history shape our understanding of our humanity Are we that different from our closest relatives the Great Apes How do we interpret the fossil record Human Evolution and Survival teaches students to question think critically and debate who we are how we got that way and how we will survive into the future The text includes worksheets for studying genetic traits discussion questions and dermatoglyphics fingerprinting and PTC tasting laboratories Chapters also include links to related websites allowing for further study Human Evolution and Survival can be used in courses on Human Evolution Physical Anthropology and Biological Anthropology It is also appropriate for courses on Genetics and Diversity **An Introduction to Human Evolutionary Anatomy** Leslie Aiello, Christopher Dean, 1990-01-28

For students of Human Evolution the fossil evidence of skeletal remains is a prime source of information from which to reconstruct the form and lifestyle of the early hominids But how is this evidence to be fully and properly used by students with little or no anatomical training In this book an anthropologist and an anatomist have combined their skills to provide students and research workers with the essentials of anatomy and the means to apply these to investigations into hominid form and function Armed with the basic principles and relevant bones conclusions can be reached regarding the probable musculature stance brain size age weight and sex of a particular fossil specimen The sort of deductions which are possible are illustrated by reference back to contemporary apes and humans and a coherent picture of the history of hominid evolution emerges Written in a clear and concise style and profusely illustrated this book is a basic reference for all concerned with human evolution and a valuable companion both to laboratory practical sessions and to new research using fossil skeletons
