Fire and Flammability of Furnishings and Contents of Buildings Andrew J. Fowell, 1994 Her Daughter the Engineer Richard I. Bourgeois-Doyle, 2008 Elsie MacGill the world's first female aeronautical engineer and professional aircraft designer influenced early bush planes and guided production of famous aircraft in World War II Elsie the engineer was also the driving force on Canada's Royal Commission on the Status of Women and every inch the daughter of the suffragette judge Helen MacGill Affected by muscle paralysis at 24 Elsie often struggled to walk as she pursued her amazing career Provided by publisher *The Code of Federal Regulations of the United States of America*, 2003 The Code of Federal Regulations is the codification of the general and permanent rules published in the Federal Register by the executive departments and agencies of the Federal Government *Investing in Condominiums* Brian Persaud, Randy Ramadhin, 2011-11-08 A lot of information has been published for those who wish to buy a condo as a principal residence but not for investors who want to expand into the condominium market Investing in condominiums is not about being caught up in the mass hysteria of lining up to buy a pre construction unit in a hot neighbourhood and hopefully flipping it at a profit when it's built On the contrary investing in condos can be a very good way to generate solid returns when done according to the proven strategies outlined in the book Investing in Condominiums will show readers the ins and outs of profitable condo investing by sticking to investing fundamentals carrying out proper due diligence and having an exit plan Pre construction condominiums especially in Toronto and Vancouver are sought after by both Canadian and international investors The stable economy low interest rate environment and appreciating values are a recipe for investor success Investing in Condominiums gives Canadian investors the nuts and bolts of undertaking such an investment based on real life examples and expert knowledge By reading this book the investor can proceed with full confidence knowing that they are asking the right questions doing the math and assembling the right team of experts that will help them realize their investment goals Structures Under Shock and Impact XII G. Schleyer, C. A. Brebbia, 2013 Of interest to engineers from civil military nuclear offshore aeronautical transportation and other backgrounds this book contains the proceedings of a well established conference on the subject that was first held in 1989 Topics covered include Impact and Blast Loading Characteristics Protection of Structures from Blast Loads Energy Absorbing Issues Structural Crashworthiness Hazard Mitigation and Assessment Behaviour of Steel Structures Behaviour of Structural Concrete Material Response to High Rate Loading Seismic Engineering Applications Interaction Between Computational and Experimental Results Innovative Materials and Material Systems Fluid Structure Interaction The shock and impact behaviour of structures presents challenges to researchers not only because it has obvious time dependent aspects but also because it is difficult to specify the external dynamic loading characteristics and to obtain the full dynamic properties of materials It is crucial that we find ways to share the contributions and understanding that are developing from various theoretical numerical and experimental studies as well as investigations

Regulatory Choices Richard J. Gilbert,2023-11-15 Regulatory Choices offers the first comprehensive economic history of energy policy and its consequences for California where some of the most innovative and far ranging programs of regulatory reform have originated The authors of this volume have gathered together an impressive wealth of material about actual policy decisions and their repercussions and have subjected their findings to astute economic analysis This book will serve for years to come as an invaluable reference on the costs and effects of various energy policies With its focus on bringing prices in alignment with the true cost of producing power and delivering it to the customer the first part of the book outlines the issue of setting utility rates and considers some of the proposals to provide regulated industries with incentives to

respond to economic and environmental concerns The problems of energy supply occupy the second part of the book which includes a survey of the costs of alternative energy sources and estimates of their environmental impacts as well as a case study of the construction of the Diablo Canyon nuclear power plant The book concludes by documenting the results of subsidy programs that were designed to target the development of wind power and residential energy conservation Regulators we learn have a mixed record when it comes to managing the production of energy Some conservation programs have enjoyed considerable economic success particularly those that correct a lack of consumer information Others such as the renewable energy tax credits or programs designed to subsidize new technologies have cost much more than the value of the energy they have saved What emerges clearly from this study is that regulated industries are not immune from the forces of competition This title is part of UC Press s Voices Revived program which commemorates University of California Press s mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1991
