

Phylogenetic Trees

How do the changes in gene sequences allow us to reconstruct the evolutionary relationships between related species?

Why?

The saying "Don't judge a book by its cover," could be applied to the topic of evolution. For example, humans share 75% of their DNA with chickens. Biologists point to this as evidence that humans and chickens once shared a common ancestor. The advent of DNA technology has given scientists the tools with which to examine how closely related certain species are. DNA analysis allows scientists to construct phylogenetic trees whose branches link together the relatedness of different organisms.

Model 1 – Phylogenetic Trees

1. Refer to Model 1.
 - a. How long ago did the common ancestor of all the organisms on this phylogenetic tree exist?
35 mil.
 - b. Which two lines diverged 30 million years ago?
bear and panda
 - c. List all modern descendants of the organism that was alive at the point indicated by the asterisk.
every thing except
black and polar

Tree Thinking: An Introduction to Phylogenetic Biology David A. Baum, Stacey D. Smith, 2012-08-10 Baum and Smith both professors evolutionary biology and researchers in the field of systematics present this highly accessible introduction to phylogenetics and its importance in modern biology Ever since Darwin the evolutionary histories of organisms have been portrayed in the form of branching trees or phylogenies However the broad significance of the phylogenetic trees has come to be appreciated only quite recently Phylogenetics has myriad applications in biology from discovering the features present in ancestral organisms to finding the sources of invasive species and infectious diseases to identifying our closest living and extinct hominid relatives Taking a conceptual approach Tree Thinking introduces readers to the interpretation of phylogenetic trees how these trees can be reconstructed and how they can be used to answer biological questions Examples and vivid metaphors are incorporated throughout and each chapter concludes with a set of problems valuable for both students and teachers Tree Thinking is must have textbook for any student seeking a solid foundation in this fundamental area of evolutionary biology

Species Tree Inference Laura Kubatko, L. Lacey Knowles, 2023-03-14 Inferring evolutionary relationships among a collection of organisms that is their relationship to each other on the tree of life remains a central focus of much of evolutionary biology as these relationships provide the background for key hypotheses For example support for different hypotheses about early animal evolution are contingent upon the phylogenetic relationships among the earliest animal lineages Within the last 20 years the field of phylogenetics has grown rapidly both in the quantity of data available for inference and in the number of methods available

for phylogenetic estimation The authors first book *Estimating Species Trees Practical and Theoretical Aspects* published in 2010 gave an overview of the state of phylogenetic practice for analyzing data at the time but much has changed since then The goal of this book is to serve as an updated reference on current methods within the field The book is organized in three sections the first of which provides an overview of the analytical and methodological developments of species tree inference Section two focuses on empirical inference Section three explores various applications of species trees in evolutionary biology The combination of theoretical and empirical approaches is meant to provide readers with a level of knowledge of both the advances and limitations of species tree inference that can help researchers in applying the methods while also inspiring future advances among those researchers with an interest in methodological development

A Phylogenetic Tree of the Animal Kingdom (including Orders and Higher Categories) Jarmila Kukalová-Peck, 1973

Facility Location in the Phylogenetic Tree Space Marco Botte, 2019

Phylogenetics is a field of biology trying to describe the evolutionary history of a given set of populations or species Evolutionary relationships are obtained through statistical models for phylogenetic inference In this thesis we aim to find the phylogenetic tree that best describes the evolutionary history of the given species also called the species tree Unfortunately when applying phylogenetic inference methods to different genes that the species share the outcome varies This results in a set of possible phylogenetic trees which we use to try to infer the true species tree
