**Advances in Future Computer and Control Systems** David

Jin, Sally Lin, 2012-04-13 FCCS2012 is an integrated conference concentrating its focus on Future Computer and Control Systems Advances in Future Computer and Control Systems presents the proceedings of the 2012 International Conference on Future Computer and Control Systems FCCS2012 held April 21 22 2012 in Changsha China including recent research results on Future Computer and Control Systems of researchers from all around the world *Designing for Digital Reading* Jennifer Pearson, George Buchanan, Harold Thimbleby, 2022-05-31 Reading is a complex human activity that has evolved and co evolved with technology over thousands of years Mass printing in the fifteenth century firmly established what we know as the modern book with its physical format of covers and paper pages and now standard features such as page numbers footnotes and diagrams Today electronic documents are enabling paperless reading supported by eReading technologies such as Kindles and Nooks yet a high proportion of users still opt to print on paper before reading This persistent habit of printing to read is one sign of the shortcomings of digital documents although the popularity of eReaders is one sign of the shortcomings of paper How do we get the best of both worlds The physical properties of paper for example it is light thin and flexible contribute to the ease with which physical documents are manipulated but these properties have a completely different set of affordances to their digital equivalents Paper can be folded ripped or scribbled on almost subconsciously activities that require significant cognitive attention in their digital form if they are even possible The nearly subliminal interaction that comes from years of learned behavior with paper has been described as lightweight interaction which is achieved when a person actively reads an article in a way that is so easy and unselfconscious that they are not apt to remember their actions later Reading is now in a period of rapid change and digital text is fast becoming the predominant mode of reading As a society we are merely at the start of the journey of designing truly effective tools for handling digital text This book investigates the advantages of paper how the affordances of paper can be realized in digital form and what forms best support lightweight interaction for active reading To understand how to design for the future we review the ways reading technology and reader behavior have both changed and remained constant over hundreds of years We explore the reasoning behind reader behavior and introduce and evaluate several user interface designs that implement these lightweight properties familiar from our everyday use of paper We start by looking back reviewing the development of reading technology and the progress of research on reading over many years Drawing key concepts from this review we move forward to develop and test methods for creating new and more effective interactions for supporting digital reading Finally we lay down a set of lightweight attributes which can be used as evidence based guidelines to improve the usability of future digital reading technologies By the end of this book then we hope you will be equipped to critique the present state of digital reading and to better design and evaluate new interaction styles and technologies **Electronic Government and the Information Systems Perspective** Kim Normann Andersen, Enrico Francesconi, Ake Grönlund, Tom M van Engers, 2011-08-19 This book constitutes the refereed proceedings of the Second International Conference on Electronic

Government and the Information Systems Perspective EGOVIS 2011 held in Toulouse France in August September 2011 The 30 revised full papers presented were carefully reviewed and selected from numerous submissions Among the topics addressed are aspects of security reliability privacy and anonymity of e government systems knowledge processing service oriented computing and case studies of e government systems in several countries
