Phylogenetic Trees and Molecular Evolution David R. Bickel, 2022-09-29 This book serves as a brief introduction to phylogenetic trees and molecular evolution for biologists and biology students. It does so by presenting the main concepts in a variety of ways: first visually, then in a history, next in a dice game, and finally in simple equations. The content is primarily designed to introduce upper-level undergraduate and graduate students of biology to phylogenetic tree reconstruction and the underlying models of molecular evolution. A unique feature, also of interest to experienced researchers, is the emphasis on simple ways to quantify the uncertainty in the results more fully than is possible with standard methods. **Environmental**

Microbial Evolution Haiwei Luo, 2022-09-09 This volume explores the latest techniques used to study environmental microbial evolution with a focus on methods capable of addressing deep evolution at long timescales. The chapters in this book are organized into three parts. Part One introduces molecular dating approaches and time calibration ideas that allow for the determination of evolutionary timescales of microbial lineages. Part Two describes several advanced phylogenomic tools such as models for genome tree construction, a taxon sampling method, outgroup-independent tree rooting methods, and gene family evolution models. Part Three covers techniques used to study trait evolution. Written in the highly successful *Methods in Molecular Biology* series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Cutting-edge and comprehensive *Environmental Microbial Evolution: Methods and Protocols* is a valuable tool for all researchers who are interested in learning more about this important and evolving field. *Provenance and*

Annotation of Data Luc Moreau, 2006-09-27 This book constitutes the thoroughly referred post-proceedings of the International Provenance and Annotation Workshops (IPAW) 2006 held in Chicago, IL, USA, in May 2006. The 26 revised full papers presented together with two keynote papers were carefully selected for presentation during two rounds of reviewing and improvement. The papers are organized in topical sections. *Objective Life Science (Plant Science)* Kumar Prasann & Dwivedi Padmanabh, *Objective Life Science: Plant Science* is an exclusive, fundamental, search-based collection of multiple-choice questions prepared for students mainly to help them revise, consolidate, and improve their knowledge and skills.

Specialised membrane domains of plasmodesmata, plant intercellular nanopores Jens Tilsner, Emmanuelle Bayer, Sébastien MONGRAND, Lesley Torrance, 2014-12-17 Plasmodesmata (PD) are plant-specific intercellular nanopores defined by specialised domains of the plasma membrane (PM) and the endoplasmic reticulum (ER), both of which contain unique proteins and probably different lipid compositions than the surrounding bulk membranes. The PD membranes form concentric tubules with a minimal outer diameter of only 50 nm and the central ER strand constricted to 10–15 nm, representing one of the narrowest stable membrane tubules in nature. This unique membrane architecture poses many biophysical, structural, and functional questions. PM continuity across PD raises the question as to how a locally confined membrane site is established.

and maintained at PD There is increasing evidence that the PM within PD may be enriched in membrane rafts or TET web domains Lipid rafts often function as signalling platforms in line with the emerging view of PD as central players in plant defense responses Lipid lipid immiscibility could also provide a mechanism for membrane sub compartmentalisation at PD Intricate connections of the PM to the wall and the underlying cytoskeleton and ER may anchor the specialised domains locally The ER within PD is even more strongly modified Its extreme curvature suggests that it is stabilised by densely packed proteins potentially members of the reticulon family that tubulate the cortical ER The diameter of the constricted ER within PD is similar to membrane stalks in dynamin mediated membrane fission during endocytosis and may need to be stabilised against spontaneous rupture The function of this extreme membrane constriction and the reasons why the ER is connected between plant cells remain unknown Whilst the technically challenging search for the protein components of PD is ongoing there has been significant recent progress in research on biological membranes that could benefit our understanding of PD function With this Research Topic we therefore aim to bring together researchers in the PD field and those in related areas such as membrane biophysics membrane composition and fluidity protein lipid interactions lateral membrane heterogeneity lipid rafts membrane curvature and membrane fusion fission We wish to address questions such as What mechanisms restrict lateral mobility of proteins and lipids along the PD membranes How can specific proteins be targeted to and turned over from membrane domains with restricted lateral access What elements lipids proteins membrane curvature packing order thickness etc may contribute to the identity of PD membranes How do the structural and functional features of PD compare to other ER PM contact sites How is the high curvature of the PD ER stabilised and what are possible functions of such a tightly constricted membrane tubule Do PD need to be prevented from spontaneous collapse and sealing What technologies are available to address these questions that can underpin PD research We welcome interested individuals to contribute their expertise and develop new hypotheses on the particular biological and biophysical questions posed by PD We are particularly looking for articles Original Research Articles Technical Advances and State of the Art reviews that would expand on or challenge current perceptions of PD and stimulate discussion

of the biological demand for energy Genetic adaptations and phenotypic traits that enable microorganisms to tolerate long periods of energy limitation have attracted broad scientific interest in recent years Laboratory based cultivation experiments have shown that the potential to survive weeks to months in the absence of energy inputs occurs across a phylogenetically wide range of microbes Studies on natural environments have shown that energy limitation is pervasive across most habitats on Earth from highly metabolically active surface habitats to subsurface environments that have been cut off from new energy inputs for thousands of years Yet much remains to be learned about the evolutionary adaptations and life history traits that enable microorganisms to live under low energy conditions Similarly the spectrum of energy sources and metabolisms that enable and support life on Earth and potentially elsewhere in the Universe is far from constrained

Catalyzing Inquiry at the Interface of Computing and Biology National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on Frontiers at the Interface of Computing and Biology, 2006-01-01 Advances in computer science and technology and in biology over the last several years have opened up the possibility for computing to help answer fundamental questions in biology and for biology to help with new approaches to computing Making the most of the research opportunities at the interface of computing and biology requires the active participation of people from both fields While past attempts have been made in this direction circumstances today appear to be much more favorable for progress To help take advantage of these opportunities this study was requested of the NRC by the National Science Foundation the Department of Defense the National Institutes of Health and the Department of Energy The report provides the basis for establishing cross disciplinary collaboration between biology and computing including an analysis of potential impediments and strategies for overcoming them The report also presents a wealth of examples that should encourage students in the biological sciences to look for ways to enable them to be more effective users of computing in their studies

Berg,2025-08-26 Since the introduction of archaea as the third domain of life in the late 1970s demonstrated distinct phylogenetic differences from the dichotomy of prokaryotes and eukaryotes further differences between archaea such as their physiology and structure have further defined the domain This also includes clear differences in the metabolic pathways of archaea for example modified versions of the Embden Meyerhof and Entner Doudoroff pathways in archaeal glycolysis and a modified mevalonate pathway Some of the metabolic pathways observed in archaea are believed to be specific to the domain Archaea are ubiquitous and while they can be found in soil marshlands and the gastrointestinal tract of animals they can also be found in some of the most diverse and extreme environments including high salinity acidic or alkaline and extremely high and low temperature environments **Fitness Costs and Benefits of Female Song** Michelle L. Hall,Naomi E. Langmore,2017-09-11 Bird song traditionally regarded as primarily a male trait is in fact widespread among female songbirds and was probably present in the ancestor of modern songbirds Odom et al 2014 Nature Communications These recent findings challenge the view that sexual dimorphism in the expression and complexity of song is largely the outcome of sexual selection on males It is now clear that understanding the evolution of bird song requires explaining variation within and among species in the expression and complexity of female song To do this we need a better understanding of the nature of variation in female song in different contexts and systems as well as the fitness costs and benefits of variation in the expression and complexity of female song This Research Topic draws together current research on female song with the goal of understanding the fitness costs and benefits of the diversity of female singing behaviour apparent among songbirds It includes articles ranging from single species studies investigating how female song varies with context and contrasts with male song to comparative analyses exploring relationships between female song and ecological social and other factors as well as opinion pieces **The Phylogenetic Handbook** Philippe Lemey,Marco Salemi,Anne-Mieke Vandamme,2009-03-26 The Phylogenetic Handbook is a broad hands on guide to theory and practice of nucleotide and protein phylogenetic analysis This second edition includes six new chapters covering topics such as Bayesian inference tree topology testing and the impact of recombination on phylogenies as well as a detailed section on molecular adaptation The book has a stronger focus on hypothesis testing than the previous edition with more extensive discussions on recombination analysis detecting molecular adaptation and genealogy based population genetics Many chapters include elaborate practical sections which have been updated to introduce the reader to the most recent versions of sequence analysis and phylogeny software including BLAST FastA Clustal T coffee Muscle DAMBE Tree puzzle Phylip MEGA PAUP IQPNNI CONSEL ModelTest Prottest
