Approximate Analytical Methods for Solving Ordinary Differential Equations T.S.L Radhika, T. K.V. Iyengar, T. Raja Rani, 2014-10-31 Approximate Analytical Methods for Solving Ordinary Differential Equations ODEs is the first book to present all of the available approximate methods for solving ODEs eliminating the need to wade through multiple books and articles It covers both well established techniques and recently developed procedures including the classical series solution method diverse perturbation methods pioneering asymptotic methods and the latest homotopy methods The book is suitable not only for mathematicians and engineers but also for biologists physicists and economists It gives a complete description of the methods without going deep into rigorous mathematical aspects Detailed examples illustrate the application of the methods to solve real world problems The authors introduce the classical power series method for solving differential equations before moving on to asymptotic methods They next show how perturbation methods are used to understand physical phenomena whose mathematical formulation involves a perturbation parameter and explain how the multiple scale technique solves problems whose solution cannot be completely described on a single timescale They then describe the Wentzel Kramers and Brillouin WKB method that helps solve both problems that oscillate rapidly and problems that have a sudden change in the behavior of the solution function at a point in the interval The book concludes with recent nonperturbation methods that provide solutions to a much wider class of problems and recent analytical methods based on the concept of homotopy of topology

Classroom-based Interventions Across Subject Areas Gabriel Stylianides, Ann Childs, 2018-11-01 Classroom based Interventions Across Subject Areas explores cutting edge educational research that has real potential to support the improvement of classroom practice Written by expert researchers and practitioners it provides empirically tested and theory based approaches that practitioners can use to improve learning in classroom settings This edited volume provides examples of classroom based interventions in English mathematics science languages history and geography Taking as its basis research which has been conducted in actual classrooms with close collaboration between researchers and practitioners this text will help researchers and practitioners understand how and why interventions can be successful or not The text further considers the broad theoretical and practical issues that derive from intervention studies including the nature of collaboration between researchers and teachers and ways of adapting effective classroom based interventions for use in different contexts Offering insight into the methodology behind successful classroom based interventions this text will be essential reading for students of education trainee teachers and all those concerned with how educational research can impact on teaching and learning

Population Forecasting 1895-1945 H.A. de Gans, 2012-12-06 Authors scholars and scientists whose mother tongue is not one of the major languages of international communication are seriously disadvantaged Some individuals such as Joseph Conrad or Vladimir Nabokov have overcome

that handicap brilliantly Others learn to live with it they can express themselves sufficiently lucidly in a second language to make their voice heard internationally At least when they have something original or striking to say they will be certain to reach their peers Most scientists and scholars fall into that category Others again have to wait until their work has been translated before its value is recognised This may apply even to those whose mother tongue is widely read The writings of Frenchmen Lyotard Derrida Baudrillard or Foucault on post modernism on language discourse and power for example had tremendous world wide impact only after English translations appeared on the market De Gans study of the development of population forecasting in The Netherlands is another striking illustration of the effects a language barrier may have He demonstrates convincingly that although a possibly somewhat awkward Dutchman named Wiebols was a pioneer of modern cohort component demographic forecasting he never received international recognition for this In his thesis of 1925 Wiebols employed the newest instruments of demographic analysis in improving forecasting methodology
