Student Exploration: Human Evolution - Skull Analysis

Vocabulary: bipedal, canine, cranial capacity, cranium, evolve, foramen magnum, hominid, hominin, index, maxilla, orbit, palate, skull

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

1. Label one of the skulls below as human and the other as a chimpanzee skull.

human

chimpanzee

2. What features did you use to identify which skull was human and which was chimpanzee?

The size of the jaw, the teeth, the shape of the skull, etc.

Gizmo Warm-up

In 1924, a fossilized skull that looked very similar to a chimp skull was discovered. But the skull most definitely did not belong to a chimp. The location of the **foramen magnum**—a hole in the skull where the spinal cord exits—indicated that the individual was **bipedal**, or walked on two legs. This fossil was some of the earliest evidence of human evolution.

Using the Human Evolution – Skull Analysis Gizmo, you will discover some of the ways that skulls can be used to learn about human evolution. Start by comparing two modern **hominids**: a human and a chimpanzee.

1. Examine the **Front** view of the **Homo sapiens** (modern human) skull. Then, use the **Select skull** menu to examine the same view of the **Pan troglodytes** (chimp) skull.

How do the skulls compare? The eye sockets are shaped differently, the teeth are not, the size of the craniums also differ, the jaws are also different sizes.

2. Now, examine the **Bottom** view of the two skulls. How do they compare? The spinal cord exit is placed in a different spot in each skull, the mouth's shape is also different, the size of the cranium, and the jaw are also different in the bottom view.

Lieberman,2011-01-03 In one sense human heads function much like those of other mammals We use them to chew smell swallow think hear and so on But in other respects the human head is quite unusual Unlike other animals even our great ape cousins our heads are short and wide very big brained snoutless largely furless and perched on a short nearly vertical neck Daniel E Lieberman sets out to explain how the human head works and why our heads evolved in this peculiarly human way Exhaustively researched and years in the making this innovative book documents how the many components of the head function how they evolved since we diverged from the apes and how they interact in diverse ways both functionally and developmentally causing them to be highly integrated This integration not only permits the head s many units to accommodate each other as they grow and work but also facilitates evolutionary change Lieberman shows how when and why the major transformations evident in the evolution of the human head occurred The special way the head is integrated Lieberman argues made it possible for a few developmental shifts to have had widespread effects on craniofacial growth yet still permit the head to function exquisitely This is the first book to explore in depth what happened in human evolution by integrating principles of development and functional morphology with the hominin fossil record The Evolution of the Human Head will permanently change the study of human evolution and has widespread ramifications for thinking about other branches of evolutionary biology **Data for the Problem of Evolution in Man** Alice Elizabeth Lee,1901 **Data for the Problem of Evolution in Man** ,1901 **The Fossil Evidence for Human Evolution** Wilfrid Edward Le Gros Clark,1955 **Wiley-Blackwell Student Dictionary of Human Evolution** Bernard Wood,2015-02-23 Not so long ago all a student studying human evolution needed was a familiarity with the relatively sparse fossil record and what limited information there was about the context of the sites a basic knowledge of gross anatomy and archeology and an understanding of simple analytical methods Times have changed The fossil record has grown exponentially imaging techniques have advanced dramatically quantitative methods have burgeoned and molecular biology has revolutionized our understanding of genetics evolutionary history and development Added to this are advances in the archeological biological and earth sciences that help interpret the context of the fossil evidence and reconstruct behavior But presently there is nowhere students of human evolution can easily find out about topics as disparate as ameloblast

Bones, Stones and Molecules David W. Cameron, Colin P. Groves, 2004-07-08 Bones Stones and Molecules provides some of the best evidence for resolving the debate between the two hypotheses of human origins The debate between the Out of Africa model and the Multiregional hypothesis is examined through the functional and developmental processes associated with the evolution of the human skull and face and focuses on the significance of the Australian record The book analyzes important new discoveries that have occurred recently and examines evidence that is not available elsewhere Cameron and Groves argue that the existing evidence supports a recent origin for modern humans from Africa They also specifically relate these two theories to interpretations of the origins of the first Australians The book provides an up to date interpretation of the fossil archaeological and the molecular evidence specifically as it relates to Asia and Australia in particular Readily accessible to the layperson and professional Provides concise coverage of current scientific evidence Presents a robust computer generated model of human speciation over the last 7 million years Well illustrated with figures and photographs of important fossil specimens Presents a synthesis of great ape and human evolution

The Skull of Australopithecus afarensis William H. Kimbel, Yoel Rak, Donald C. Johanson, 2004-03-11 The book is the most in depth account of the fossil skull anatomy and evolutionary significance of the 3.63 million year old early human species *Australopithecus afarensis* Knowledge of this species is pivotal to understanding early human evolution because 1 the sample of fossil remains of *A. afarensis* is among the most extensive for any early human species and the majority of remains are of taxonomically informative skulls and teeth 2 the wealth of material makes *A. afarensis* an indispensable point of reference for the interpretation of other fossil discoveries 3 the species occupies a time period that is the focus of current research to determine when where and why the human lineage first diversified into separate contemporaneous lines of descent Upon publication of this book this species will be among the most thoroughly documented extinct ancestors of humankind The main focus of the book its organizing principle is the first complete skull of *A. afarensis* specimen number A.L. 444-2 at the Hadar site Ethiopia the home of the remarkably complete 3.18 million year old skeleton known as Lucy found at Hadar by third author D. Johanson in 1974 Lucy and other fossils from Hadar together with those from the site of Laetoli in Tanzania were controversially attributed to the then brand new species *A. afarensis* by Johanson T. White and Y. Coppens in 1978 However a complete skull which would have quickly resolved much of the early debate over the species proved elusive until second author Y. Rak's discovery of the 444 skull in 1992 The book details the comparative anatomy of the new skull and the cast of its brain analyzed by R. Holloway and M. Huan as well as of other skull and dental finds recovered during the latest ongoing field work at Hadar and analyzes the evolutionary significance of *A. afarensis* in the context of other critically
