Student Exploration: Ray Tracing (Lenses)

Vocabulary: concave lens, convex lens, focal point, image, magnification, real image, refraction, virtual image

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

Agnes is trapped on a desert island with nothing but a magnifying glass. She wants to use the glass to focus sunlight and start a fire. She holds the glass above some dry grass as shown at right.

1. On the diagram, draw the path the Sun rays will likely take from the magnifying glass to the grass.
2. A magnifying glass is an example of a **convex lens**—a lens that curves outward on both sides.

Why is a convex lens useful for starting fires? They would be useful because they can focus all the sunlight on one point of the grass so that part of the grass would be under intense heat which will spread to other parts of the grass.

Gizmo Warm-up

The *Ray Tracing (Lenses)* Gizmo shows light rays passing through a lens. The light rays are bent by **refraction** as they pass through the lens and form a focused **image** to the right of the lens.

To begin, turn on the **Colorize lines** checkbox. Under **Show lines**, turn off the **Central line** and the **Line through focal point** so that only the **Parallel line** is showing.

1. The blue dots in front of and behind the lens are the **focal points** of the lens. Move the candle on the left back and forth and up and down.

What is always true about the light ray that emerges from the right side of the lens?

The light emerging from the right side of the lens always pass through the focal point.

2. Turn off the **Parallel line** and turn on the **Line through focal point**. Move the candle. What do you notice about this line?

- The ray passes through the primary focal point of the same side of the candle
- Emergent light ray is parallel to the principal axis

Physics Jim Breithaupt, 1994 This teacher's guide accompanies a textbook written for the co-ordinated science syllabuses under the National Curriculum and for Science Physics. There are companion volumes on biology and chemistry. Topics are differentiated into core material for Double Science and extension material for Science Physics. These topics are linked to related ones in the companion volumes but the links are optional, allowing the physics book to stand alone. The teacher's guide includes a link to the Programme of Study for Sc4 and part of Sc3 and an analysis of the separate science syllabuses of all the main boards.
