Linear Relations and Functions

Linear Relations and Functions A linear equation has no operations other than addition, subtraction, and multiplication of a variable by a constant. The variables may not be multiplied together or appear in a denominator. A linear equation does not contain variables with exponents other than 1. The graph of a linear equation is always a line.

A **linear function** is a function with ordered pairs that satisfy a linear equation. Any linear function can be written in the form $f(x) = mx + b$, where m and b are real numbers.

If an equation is linear, you need only two points that satisfy the equation in order to graph the equation. One way is to find the x -intercept and the y -intercept and connect these two points with a line.

Example 1: Is $f(x) = 0.2 - \frac{x}{6}$ a linear function? Explain.

Yes; it is a linear function because it can be written in the form $f(x) = -\frac{1}{6}x + 0.2$.

Example 2: Is $2x + xy - 3y = 0$ a linear function? Explain.

No; it is not a linear function because the variables x and y are multiplied together in the middle term.

Exercises

State whether each function is a linear function. Write *yes* or *no*. Explain.

1. $6y - x = 7$

Yes; it can be written as $y = \frac{x}{6} + \frac{7}{6}$.

2. $9x = \frac{16}{y}$

No; the variable y appears in the denominator.

3. $f(x) = 2 - \frac{x}{11}$

Yes; it can be written as $f(x) = -\frac{x}{11} + 2$.

4. $2y - \frac{x}{6} - 4 = 0$

Yes; it can be written as $y = \frac{x}{12} + 2$.

5. $1.6x - 2.4y = 4$

Yes; it can be written as $y = \frac{2}{3}x - \frac{5}{3}$.

6. $0.2x = 100 - \frac{0.4}{y}$

No; the variable y appears in the denominator.

7. $f(x) = 4 - x^2$

No; the variable x is being multiplied by itself.

8. $f(x) = \frac{4}{x}$

No; the variable x appears in the denominator.

9. $2yx - 3y + 2x = 0$

No; the variables x and y are being multiplied together.

Starbuck,2016-01-08 This Study Guide is designed to help students review and apply the material presented in the textbook Families in Context Many of the sample questions were originally prepared by Wanda Clark for the first edition of the textbook The organization of this study guide corresponds to chapters in Families in Context To learn more about the Families in Context main text please visit the bookpage here Families In Context Second Edition Revised Updated Improving outcomes in cerebral palsy with early intervention: new translational approaches Anna Purna Basu,Gavin John Clowry,2015-03-30 The aim of this Research Topic was to collate articles describing prediction of outcomes of pre and perinatal lesions leading to cerebral palsy basic research in animal models and human subjects and ideas for and trials of interventions in the first two years of life CP arises from insults to the sensorimotor cortex subcortical axon tracts and subplate The aetiology is complex and often multifactorial The outcome is not simply a loss of voluntary control due to disruption of descending pathways but also involves abnormal development of reflex and corticospinal circuitry CP may be viewed as aberrant plasticity in response to a lesion indeed abnormalities in movement are subtle at first but develop subsequently It is misleading to suppose that developmental mechanisms are self reparative The challenge is to understand activitydependent fine tuning of neural circuitry during normal development and to find how to promote desirable plasticity whilst limiting undesirable effects following developmental lesions However before proposing interventions we have to

develop our ability to predict the severity of neonatal insults We solicited a variety of articles including long and short reviews original research and opinion pieces from both basic scientists and clinicians Likewise we as editors have complementary knowledge and experience in this area Anna Basu is an academic pediatric neurologist and Gavin Clowry is a developmental neuroscientist
