Modeling Protein Synthesis Lab

Objectives:

- To simulate the process of protein synthesis, using paper clips.
- To translate codons and identify the correct sequence of amino acids.

Hypothesis: In which strands do you expect to see similarities: DNA, complementary DNA, mRNA and/or tRNA?

Materials:

- Colored paper clips
- Masking tape
- Shower curtain loops
- Textbook
- Pencil/Marker

*Adenine and Guanine will be large paper clips.

*Thymine, Cytosine, and Uracil will be small paper clips.

Write in the colors for your paper clips below.

Protein Synthesis Paper Lab:

Impacts of Teacher Evaluation and Professional Development on Student Outcomes Edward Crowe, Rena F.

Subotnik, 2012-07-01 This particular case study is designed to explore the extent to which a teacher evaluation system is effective. It also addresses the challenge of measuring student achievement gains when the students in question are already at the high end of the scale, a different yet important problem in an era when many concentrate on low hanging fruit or students on the bubble between failure and marginal performance. By presenting a realworld case, various research methods for studying issues raised by the case and the interchange among scholars engaged in this effort, this volume will allow educational policymakers and practitioners to decide if a proposed approach is compelling and relevant for their settings. Concurrently, a comparison of various research methods addressing a real school based problem provides an important learning tool for the research community and for those who study and make policy. We also believe that the case study and the research designs will be useful for those with responsibility for framing and funding a research agenda in education that utilizes strong research designs applied to topics that matter to student outcomes at all levels of the U S education system and at all levels of pupil performance. And finally, we hope that doctoral programs that seek to prepare the next generation of education researchers will find our approach helpful in their work.

The Molecular Mechanisms of Antibiotic Resistance in Aquatic Pathogens Xiangmin Lin, Patrícia Poeta, Bo Peng, Xiao-Peng Xiong, 2020-12-09 This eBook is a collection of articles from a Frontiers Research Topic. Frontiers Research Topics are very popular trademarks of the Frontiers Journals Series; they are collections of at least ten articles all centered on a particular subject. With their unique mix of varied contributions from Original Research to Review Articles, Frontiers Research Topics unify the most influential researchers, the latest key findings, and historical advances in a hot research area. The Septins Peter A. Hall, S. E. Hilary Russell, John R. Pringle, 2008-11-20 The authors represent most of the key figures and the work, and the book as a whole is an essential reference for the newcomer or specialist in this area and for any student of eukaryotic cell structure and function. This is an important and wonderful reference. Microbiology Today, May 2009. Septins are an evolutionarily conserved group of GTP binding and filament forming proteins that were originally discovered in yeast. Once the preserve of a small band of yeast biologists, the field has grown rapidly in the past few years and now encompasses the whole of animal and fungal biology. Furthermore, septins are nowadays recognized to be involved in a variety of disease processes from neoplasia to neurodegenerative conditions. This book comprehensively examines the septin gene family and their proteins, providing those new to this research area with a detailed and wide ranging introduction to septin biology. It starts with a unique historical

perspective on the development of the field from its beginnings in the screen for cell division mutants by the Nobel Laureate Lee Hartwell The evolution of the septin gene family then forms a basis for consideration of the biochemistry and functions of septins in yeast and other model organisms including C elegans and Drosophila A major part of the book considers the diversity of septins in mammals their functions and properties as well as their involvement in normal and abnormal cellular states followed by a speculative overview from the editors of the key questions in septin research and of where the field may be headed In addition several appendices summarise important information for those in or just entering the field e g nomenclature and septin and septin like sequences This book is an essential source of reference material for researchers in septin biology cell biology genetics and medicine in particular pathology including areas of neurobiology oncology infectious disease and developmental biology
