

## **Pathophysiology Exam 1**

**Pathology:** The study and diagnosis of disease through examination of organs, tissues, cells, and bodily fluids.

**Physiology:** The study of the mechanical, physical, and biochemical functions of living organisms.

Together, **Pathophysiology:** The study of abnormalities in physiologic functioning of living beings.

**What is the framework of Pathophysiology consist of?** Etiology/Pathogenesis, Clinical Manifestations, Implications/Treatments

**Homeostasis:** A state of equilibrium, of balance within the organism; maintaining internal conditions in a stable state

**Allostasis:** The overall process of adaptive change necessary to maintain survival and well-being; "restores balance, "is the activation of stress responses to return to homeostasis

### **General Adaptation System (GAS): 3 Physiologic Stages**

**1. Alarm Stage:** Fight-or-Flight response. Begins in the hypothalamus>secretes corticotropin-releasing hormone(CRH) to activate the Sympathetic Nervous System(SNS), which in turn stimulates the Adrenal Medulla to release the Catacholamines: Epinephrine and Norepinephrine.

Additionally, the hypothalamus secretes CRH to stimulate the Anterior Pituitary Gland to release adrenocorticotrophic hormone(ACTH). ACTH then causes the adrenal cortex to release large amounts of glucocorticoids, specifically Cortisol.

This cascade of effects is termed the hypothalamic-pituitary-adrenal(HPA)axis. Once the pituitary gland is activated, the alarm stage moves to the next stage in GAS: Resistance Stage

**2. Resistance or Adaptation Stage:** The Sympathetic Nervous System(SNS), the adrenal medulla and cortex are working full force to mobilize resources to manage the stressor. These resources are: glucose, free fatty acids, and amino acids. Concentrations of these resources are increased through the effects of Cortisol and Catacholamines(Epi and Norepi).

These resources are used for energy, and also building blocks for growth and repair after stress stops. The body returns to a steady state/homeostasis.

**3. Exhaustion Stage:** The body is no longer able to return to homeostasis. When energy resources are completely depleted, death occurs because the body can no longer adapt.
