Kepner, 2007-10-02 This book examines environmental security from the perspective of landscape sciences identifying the forces that threaten environmental security at all levels It stems from the last five years of the Pilot Study Project on Use of Landscape Sciences for Environmental Assessment sponsored by the NATO Committee on the Challenges of Modern Society Readers explore concepts of environmental security from

subjective and objective perspectives      Historical Land Use/Land Cover Classification Using Remote Sensing Wafi Al-Fares, 2013-06-25 Although the development of remote sensing techniques focuses greatly on construction of new sensors with higher spatial and spectral resolution it is advisable to also use data of older sensors especially the LANDSAT mission when the historical mapping of land use land cover and monitoring of their dynamics are needed Using data from LANDSAT missions as well as from Terra ASTER Sensors the authors shows in his book maps of historical land cover changes with a focus on agricultural irrigation projects The kernel of this study was whether how and to what extent applying the various remotely sensed data that were used here would be an effective approach to classify the historical and current land use land cover to monitor the dynamics of land use land cover during the last four decades to map the development of the irrigation areas and to classify the major strategic winter and summer irrigated agricultural crops in the study area of the Euphrates River Basin      **International GIS Sourcebook**, 1993      **Image Processing and Data Analysis with ERDAS IMAGINE®** Stacy A.C. Nelson, Siamak Khorram, 2018-10-03 Remotely sensed data in the form of digital images captured from spaceborne and airborne platforms provide a rich analytical and observational source of information about the current status as well as changes occurring in on and around the Earth's surface The data products or simply images processed from these platforms provide an additional advantage in that geographic areas or regions of interest can be revisited on a regular cycle This revisit cycle allows geospatial analysts and natural resource managers to explore changing conditions over time Image Processing and Data Analysis with ERDAS IMAGINE explains the principles behind the processing of remotely sensed data in a simple easy to understand and how to format Organized as a step by step guide with exercises adapted from original research and using publicly available imagery such as NASA Landsat ESA Sentinel 2 Orthophotos and others this book gives readers the ability to quickly gain the practical experience needed to navigate the ERDAS IMAGINE software as well as learn certain applications in Esri's ArcMap ArcGIS for Desktop software and Quantum the GIS QGIS open source applications package It also helps readers to easily move beyond the information presented in this book and tackle more advanced skills Written by two professors with long experience in remote sensing and image processing this book is a useful guide and reference for both undergraduate and graduate students researchers instructors managers and agency professionals who are involved in the study of Earth systems and the environment      Soft Computing in Image Processing Mike Nachtgael, Dietrich van der Weken, Etienne E. Kerre, Wilfried Philips, 2007-06-24 Images have always been very important in human life Their applications range from primitive communication between humans of all ages to advanced technologies in the industrial medical and military field The increased possibilities to capture and analyze images have contributed to the largeness that the scientific field of image processing has become today Many techniques are being applied including soft computing Soft Computing in Image Processing Recent Advances follows the edited volumes Fuzzy Techniques in Image Processing volume 52 published in 2000 and Fuzzy Filters for Image Processing volume 122 published
