

Exercise 6.6

It should be good enough to check just a few of the possibilities. It would be wise to check the boundaries as well as at least one non-boundary value. Examples of times to test: 9, 13, 17

Exercise 6.7

Yes, it is possible to use the same appointment object at different times within a single day.

The tests are not as legitimate anymore, because we can no longer see the difference between the objects (because there is none) and therefore we can't be sure that the appointments are in the correct time slots.

It would make sense to use the same appointment object if you have a recurring appointment. For instance you might have a daily meeting with someone.

Exercise 6.8

Several of the tests will fail.

makeAppointment only uses the starting time of an appointment to check if the slot is free, and it can therefore overwrite other appointments or exceed the boundary (which results in an exception). For instance, try booking a two-hour appointment at 1700 or one at 0900 when the 1000 time is already booked.

Exercise 6.9

	Positive	Negative
6.1	X	
6.2	X	
6.3	X	
6.4		X
6.5	X	
6.6		X

Other negative tests:

- test how the application handles a 'null' object as an appointment.
- test zero and negative values for duration and time.

A positive test could be to test that appointments longer than one hour have the correct duration after being inserted.

Advanced Systems Design with Java, UML and MDA Kevin Lano, 2005-04-21. The Model Driven Architecture defines an approach where the specification of the functionality of a system can be separated from its implementation on a particular technology platform. The idea being that the architecture will be able to easily be adapted for different situations whether they be legacy systems different languages or yet to be invented platforms. MDA is therefore a significant evolution of the object oriented approach to system development. Advanced System Design with Java UML and MDA describes the factors involved in designing and constructing large systems illustrating the design process through a series of examples including a Scrabble player a jukebox using web streaming a security system and others. The book first considers the challenges of software design before introducing the Unified Modelling Language and Object Constraint Language. The book then moves on to discuss systems design as a whole covering internet systems design web services Flash XML XSLT SOAP Servlets Javascript and JSP. In the final section of the book the concepts and terminology of the Model Driven Architecture are discussed. To get the most from this book readers will need introductory knowledge of software engineering programming in Java and basic knowledge of HTML. Examines issues raised by the Model Driven Architecture approach to development. Uses easy to grasp case studies to illustrate complex concepts.
