Carbon Monoxide Episodes in Meteorological and Topographical Problem Areas,2002-09-22 Carbon monoxide CO is a toxic  
air pollutant produced largely from vehicle emissions Breathing CO at high concentrations leads to reduced oxygen transport  
by hemoglobin which has health effects that include impaired reaction timing headaches lightheadedness nausea vomiting  
weakness clouding of consciousness coma and at high enough concentrations and long enough exposure death In recognition  
of those health effects the U S Environmental Protection Agency EPA as directed by the Clean Air Act established the health  
based National Ambient Air Quality Standards NAAQS for CO in 1971 Most areas that were previously designated as  
nonattainment areas have come into compliance with the NAAQS for CO but some locations still have difficulty in attaining  
the CO standards Those locations tend to have topographical or meteorological characteristics that exacerbate pollution In  
view of the challenges posed for some areas to attain compliance with the NAAQS for CO congress asked the National  
Research Council to investigate the problem of CO in areas with meteorological and topographical problems This interim  
report deals specifically with Fairbanks Alaska Fairbanks was chosen as a case study because its meteorological and  
topographical characteristics make it susceptible to severe winter inversions that trap CO and other pollutants at ground
