Manufacturers: Volkswagenwerk, A.G. Wolfsburg, Germany

All rights reserved. This Service Data Sheet is compiled by the technical staff of Motor Trader, and is checked by the vehicle manufacturers. It is the copyright of this journal, and may not be reproduced, in whole or in part, without permission.

VOLKSWAGEN cars have been in production for many years. In the early days of their history, development and modification was a slow and lengthy process compared with the fast-moving improvements which have taken place in post-war years. Any article, especially of this nature and condensed size, could not be expected to give precise details of more than one model, and it is for this reason that we are publishing the details and repair procedure for the current model only.

1961 cars, example is illustrated above, have a general resemblance to earlier cars of the series; but it cannot be over-emphasized that for virtue of their different application of various components the servicing techniques in some cases are entirely different and so this data sheet only applies to the 1961 series.

Mechanical layout is relatively simple. The flat-four horizontally opposed air-cooled engine is rear mounted and is an integral part of the transmission and final drive unit. All four forward gears are synchromesh and transmit the drive to the rear wheel final drive unit. Suspension is by independent torsion bars at the front and rear, and steering is of the direct acting worm and sector type.

Cars are identified by chassis and engine serials, for an identification plate. The chassis number is stamped on a plate fixed to the backbone of the chassis and is revealed on removal of the rear seat. Engine serials (seven figure) are embossed on the crankcase side of the generator support flange, above and to the left of the dipstick. The identification plate is found on the valance behind the spare wheel in the front luggage compartment.

Special tools have been designed to speed up and generally facilitate service work. A list of these considered essential is set out on p. 13 and it should be borne in mind that many service operations may be found difficult or impracticable without them. Before attempting service work, it is advisable to possess the requisite complement of special tools.

Service policy of the company is that, where possible or practicable, service work should be carried out through VW dealers, who are properly staffed and equipped to carry out all repair and overhaul work on VW cars. This is a policy which is in line with that applied by British manufacturers.

Threads and hexagons are all of the Metric thread series classification. To avoid any confusion whatever, readers will note that our tabular data quoted in these papers gives dimensions, clearances and tolerances in metric and English units and that where such dimensions are quoted in the text matter of this article, similar notation is used.

As in the case with most manufacturers, but particularly in the case of this car maker, it is insisted that more than two VW spares parts be used. There is a complete range of spares available from most dealers, but reference to the U.K. distributors, VW Motors, Ltd., St. John's Wood, London, quoting the chassis and engine serials of the car will confirm the availability of any specific part or parts.

DISTINGUISHING FEATURES. Similar in general lines to earlier models, the 1961 car is immediately identified by the flashing indicator lamps on front wing tops. Headlamps are fully recessed in front wings, and chrome nose plates are fitted.

ENGINE

Messing

The engine has no separate mountings and is bolted direct to the transmission case at the clutch housing joint face by two nuts and bolts and two rods and nuts.

The transmission is mounted to the frame by a rubber cushion at the front end and a rubber cushioned carrier at the rear. Carrier is bolted up to body extension by one 27mm bolt at each side. Additional mounting rubber is clipped up by two nuts and bolts to body frame at front end of transmission case.

Removal

Engine may be removed without transmission and final drive. To remove transmission it will be necessary to remove engine first. Jack up vehicle and place on stands so that car is clear of ground by three feet (approx.).

Disconnect earth strap from battery, turn fuel tap "off" and open engine cover. Take off air cleaner and remove rear cover plate. Disconnect cables, pipes and wires connected to engine unit and generator. Loosen mounting screw on distributor support and turn unit so that vacuum chamber will clear rear cover plate when engine unit is removed. Disconnect both heating control cables and loosen flexible heater pipes from engine. Remove fuel pipe at engine end.

Unscrew nuts of lower engine mounting bolts, withdraw accelerator cable from conduit tube. Place jack beneath engine and remove nuts from upper mounting bolts. Raise jack until platform contacts engine and manoeuvre engine until clutch release plate clears main drive shaft. Lower jack and tilt unit down rear end and withdraw from vehicle. Care should be taken to see that clutch components are not damaged during this stage of the procedure.
