Proceedings of the 3rd International Symposium of Information and Internet Technology (SYMINTech 2018) Mohd Azlishah Othman, Mohamad Zoinol Abidin Abd Aziz, Mohd Shakir Md Saat, Mohamad Harris Misran, 2019-05-15 This book gathers the proceedings of a symposium on the role of Internet technologies and how they can transform and improve people's lives. The Internet is essentially a massive database where all types of information can be shared and transmitted. This can be done passively in the form of non-interactive websites and blogs or it can be done actively in the form of file sharing and document upload and downloading. Thanks to these technologies a wealth of information is now available to anyone who can access the Internet. Moreover, Internet technologies are constantly improving, growing faster, offering more diverse information and supporting processes that would have been impossible in the past. As a result, they have changed and will continue to change the way that the world does business and how people interact in their day-to-day lives. In conclusion, the symposium and these proceedings provide a valuable opportunity for leading researchers, engineers, and professionals around the globe to discuss the latest advances that are helping the world move forward. They also facilitate the exchange of new ideas in the fields of communication technology to create a dialogue between these groups concerning the latest innovations, trends, and concerns, practical challenges, and potential solutions in the field of Internet technologies.

Molecular and Cellular Genetics Edward Bittar, 1996-09-24 The tools of molecular biology have revolutionised our understanding of gene structure and function and changed the teaching of genetics in a fundamental way The transition from classical genetics to molecular genetics was initiated by two discoveries One was the discovery that DNA has a complementary double helix structure and the other that a universal genetic code does exist Both led to the acceptance of the central dogma that RNA molecules are made on DNA templates The last twenty years have seen remarkable growth in our knowledge of molecular genetics most of which is the outcome of recombinant DNA technology This technology which is not limited to cloning sequencing and expression has created a biotechnology industry of its own the purpose of which is to develop new diagnostic and therapeutic approaches in medicine Both industries in collaboration with the biomedical community are now engaged in laying down the foundation of molecular medicine The present volume seeks to provide a coherent account of the new science of molecular genetics Its content however is by no means exhaustive partly because of the publication explosion but more because of space restrictions A rudimentary knowledge of genetics on the reader's part is assumed Quite understandably considerable emphasis is placed on major technical advances but not without expounding numerous new ideas and phenomena including alternative splicing POR DNA methylation genomic imprinting and so on Maximum PC, 2005 Maximum PC is the magazine that every computer fanatic PC gamer or content creator must read Each and every issue is packed with punishing product reviews insightful and innovative how to stories and the illuminating technical articles that enthusiasts crave **In**

Maintenance for Industrial Systems Riccardo Manzini, Alberto Regattieri, Hoang Pham, Emilio Ferrari, 2009-11-09 New global and extended markets are forcing companies to process and manage increasingly differentiated products with shorter life cycles low volumes and reduced customer delivery times In today's global marketplace production systems need to be able to deliver products on time maintain market credibility and introduce new products and services faster than competitors As a result a new production paradigm of a production system has been developed and a supporting management decision making approach simultaneously incorporating design management and control of the production system is necessary so that

this challenge can be effectively and efficiency met Maintenance Engineering and its Applications in Production Systems meets this need by introducing an original and integrated idea of maintenance maintenance for productivity The volume starts with the introduction and discussion of a new conceptual framework based on productivity quality and safety supported by maintenance Subsequent chapters illustrate the most relevant models and methods to plan organise implement and control the whole maintenance process reliability evaluation models and prediction maintenance strategies and policies spare parts management computer maintenance management software CMMS and total productive maintenance TPM etc Several examples of problems supported by solutions and real applications to help and test the reader s comprehension are included Maintenance Engineering and its Applications in Production Systems will certainly be valuable to engineering students doctoral and post doctoral students and also to maintenance practitioners as well as managers of industrial and service companies DNA Damage and Repair in Human Tissues Betsy M. Sutherland,Avril D. Woodhead,2012-12-06

Physical and chemical agents in the environment damage the DNA of humans and pose a major threat to human health today and to the genetic integrity of human populations Although studies on isolated DNA in vitro on prokaryotes on mammalian cells in culture and on laboratory animals have provided essential background information it is now possible to study DNA damage and repair in human tissues directly New techniques of high sensitivity especially those not requiring radioactive labeling have made possible quantitation of DNA damage and repair as well as detection of residual unrepaired DNA lesions In recent years several investigators have taken up the challenge of studying damage and repair responses in humans and we have chosen that work as the special focus of this Symposium Major advances in under standing damage and responses in human skin in blood cells and in human internal organs indicate three major themes First DNA damage levels in human tissues depend not only on the initial exposures but also on the capacity of that tissue for repair of the specific lesion type Second repair in human tissues may differ quantitatively and qualitatively from that in human cells in culture **Credit**
