pollution from the various aspects of environmental management and protection Organized into four parts encompassing 28 chapters this text begins with an overview of the gaseous composition of unpolluted air including nitrogen oxygen water argon carbon dioxide neon helium methane hydrogen nitrous oxide and organic vapor This book then differentiates the primary pollutants that are emitted directly from the source and the secondary pollutants that cause eye irritation smog and haze Other chapters consider the adverse effects of air pollution to human health environment and economy This book is a valuable resource to air pollution space atmospheric and medical scientists as well as environmentalists ecologists biologists and meteorologists This text will also be useful to economists engineers sanitarians chemists public administrators educators public relations specialists researchers and students

Fundamentals of Physics and Chemistry of the Atmosphere

Guido Visconti, 2016-06-01 This book is an introductory course to the physics and chemistry of the atmosphere and to climate dynamics It covers the basics in thermodynamics fluid dynamics radiation and chemistry and explains the most intriguing problems that currently exist in the study of the atmospheres of the Earth and planets A particular effort is made to approach the different topics intuitively Among the themes covered are the most recent evolution concerning the chemistry of polluted troposphere the global warming problem and chaos and nonlinear theory The book is almost completely rewritten in comparison to the previous edition with a more logical organization of the chapters The fundamentals of thermodynamics radiation fluid dynamics and chemistry are introduced in the first six chapters including a new chapter on remote sensing Also there is an additional chapter on geoengineering A significant addition to the new edition at the end of each chapter are examples where the topics introduced in the chapter are further discussed with application to classical problems or new research items Many of these examples are accompanied by computer programs The most important updates deal with the theory of the general circulation the methods to evaluate GCM the detailed discussion of the urban troposphere and the chaos and nonlinear phenomena
