

WEATHER PATTERNS

You are studying to be a meteorologist because you want to be a news reporter. As part of the training program you are assigned a mentor, Amber, to walk you through some of the things you will need to be able to look at, figure out, and report on.

Amber talks a lot about air parcels, which is an amount of air that moves together. You can compare an air parcel's temperature to its surrounding air to determine if there will be rain.

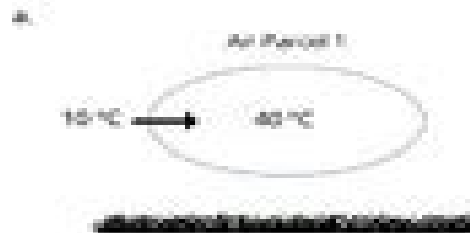

Let's check out an example.

When energy is transferred from one place to another it flows from hot to cold and loses energy.

1. Air parcel 1 and 2 is warmer than the surrounding air.

2. Select the image below that shows the correct flow of energy in air Parcel 1.
