802.11 Wireless Networking Resource Guide ,2002-10 **Home Networks , Achieving Collision Avoidance and Fairness in CSMA-based Wireless Mesh Networks** Jung Il Choi,2011 CSMA based wireless mesh networks are vulnerable to collisions Even a single unicast flow can exhibit excessive collisions from hidden terminals Furthermore fairness objectives for single hop networks can cause undesirable behaviors for mesh networks Mesh networks of wireless sensors suffer from undesirable protocol interactions due to these challenges Inter protocol collisions and unfair channel usage between protocols cause the behavior of one protocol to change depending on other protocols These inter protocol interactions complicate the design of large sensor network systems Motivated by these problems this dissertation presents grant to send a novel collision avoidance mechanism for wireless mesh networks Rather than announce packets it intends to send a node using grant to send announces packets it expects to hear others send This dissertation provides evidence that inverting collision avoidance in this way greatly improves wireless mesh performance without significant overhead Grant to send is simple to implement and is compatible with existing hardware Grant to send is also general enough to replace protocol specific collision avoidance mechanisms common to sensor network protocols While these individual mechanisms only avoid intra protocol collisions grant to send provides a MAC mechanism which can address both intra and inter protocol collisions This dissertation also proposes a fairness scheme for mesh networks which can be applied to protocol fairness The fairness scheme combines and modifies traditional flow based fairness techniques such as fair queueing and fair scheduling However the complexities of wireless make these mechanisms insufficient by themselves This dissertation therefore proposes two new mechanisms that address these limitations channel decay and fair cancellation and shows that the fairness scheme can significantly improve protocol fairness Together this dissertation shows that achieving collision avoidance and fairness can make mesh networks perform better more reliable and thus easier to design Home Wireless Networking in a Snap Joe Habraken,2006-03-15 These days nobody really wants to learn everything there is about their hardware and software And even if you did who has the time to endlessly tinker and play with it until you figure everything out You just want a book that will quickly show you how to set up your home wireless network Home Wireless Networking in a Snap is designed specifically for busy people like you This book covers the things that aren t already covered in the documentation that came with your equipment and the things you can t just figure out on your own It is organized into a series of well organized bite sized quickly accomplished tasks that lets you zero right in on particular tasks you want to accomplish This hands on approach to setting up a secure home wireless network will have your network up and running in no time **Wireless Networking Absolute Beginner's Guide** Michael Miller,2013-02-08 Make the most of your wireless network without becoming a technical expert This book is the fastest way to connect all your wireless devices get great performance with everything from streaming media to printing stay safe and secure and do more with Wi Fi than you ever thought possible Even if you ve never set up or run a network before this book will show you how to do what you want one incredibly clear and
