Instructor Note: Red font color or Gray highlights indicate text that appears in the instructor copy only.

This activity uses a complex topology and a fictitious top level domain (.pta) to avoid conflicts with Internet naming. Because PT does not forward DNS requests, the same entries have been made on each DNS server so that DNS traffic can remain local when it is relevant to do so. In order to deal with the use of RFC 1918 private addressing, NAT is used both at the Home Office and Branch Office to help avoid any misconceptions.

- Part 2: Examine Internetwork Traffic to Central
- Part 3: Examine Internet Traffic from Branch
