

# What is Political Science?

**Political science** is an academic discipline that studies the theory and practice of politics, governance, and political systems. It examines the structures, processes, and behaviors within political institutions, such as *governments, political parties, and international organizations*.

**Political scientists** analyze topics like political behavior, public policy, electoral systems, and international relations.

Through research methods including quantitative analysis, case studies, and comparative analysis, **political science** seeks to understand power dynamics, decision-making processes, and the impact of political actions on societies.

*Beyond open access: visions for open evaluation of scientific papers by post-publication peer review* Nikolaus Kriegeskorte, Diana Deca, A scientific publication system needs to provide two basic services access and evaluation The traditional publication system restricts the access to papers by requiring payment and it restricts the evaluation of papers by relying on just 2-4 pre publication peer reviews and by keeping the reviews secret As a result the current system suffers from a lack of quality and transparency of the peer review evaluation process and the only immediately available indication of a new paper's quality is the prestige of the journal it appeared in Open access is now widely accepted as desirable and is slowly beginning to become a reality However the second essential element evaluation has received less attention Open evaluation an ongoing post publication process of transparent peer review and rating of papers promises to address the problems of the current system However it is unclear how exactly such a system should be designed The evaluation system steers the attention of the scientific community and thus the very course of science For better or worse the most visible papers determine the direction of each field and guide funding and public policy decisions Evaluation therefore is at the heart of the entire endeavor of science As the number of scientific publications explodes evaluation and selection will only gain importance A grand challenge of our time therefore is to design the future system by which we evaluate papers and decide which ones deserve broad attention So far scientists have left the design of the evaluation process to journals and publishing companies However the steering mechanism of science should be designed by scientists The cognitive computational and brain sciences are best prepared to take on this task which will involve social and psychological considerations software design and modeling of the network of scientific

papers and their interrelationships This Research Topic in Frontiers in Computational Neuroscience collects visions for a future system of open evaluation Because critical arguments about the current system about these papers will focus on constructive ideas and comprehensive designs for open evaluation systems Design decisions include Should the reviews and ratings be entirely transparent or should some aspects be kept secret Should other information such as paper downloads be included in the evaluation How can scientific objectivity be strengthened and political motivations weakened in the future system Should the system include signed and authenticated reviews and ratings Should the evaluation be an ongoing process such that promising papers are more deeply evaluated How can we bring science and statistics to the evaluation process e g should rating averages come with error bars How should the evaluative information about each paper e g peer ratings be combined to prioritize the literature Should different individuals and organizations be able to define their own evaluation formulae e g weighting ratings according to different criteria How can we efficiently transition toward the future system Ideally the future system will derive its authority from a scientific literature on community based open evaluation We hope that these papers will provide a starting point

and social networking. As such, it provides the necessary basis to then discuss how those aspects could intertwine in different ways to create methods, tools, and opportunities for supporting and leveraging SIS. Next, Part II discusses the social dimension and primarily examines the online question answering activity. Part III then emphasizes the collaborative aspect of information seeking and examines what happens when social and collaborative dimensions are considered together. Lastly, Part IV provides a synthesis by consolidating methods, systems, and evaluation techniques related to social and collaborative information seeking. The book is completed by a list of challenges and opportunities for both theoretical and practical SIS work. The book is intended mainly for researchers and graduate students looking for an introduction to this new field, as well as developers and system designers interested in building interactive information retrieval systems or social community driven interfaces.

**Doing Research as a Native** Kira D. J. Merouan Mekouar, 2024. When I started fieldwork for my PhD dissertation, I was fresh out of Edward Schatz's qualitative methods graduate seminar at the University of Toronto. The seminar was based on his edited volume *Political Ethnography* (Schatz, 2009), which I devoured, but I have only recently grasped the book's importance in my discipline of political science. *Political Ethnography* signaled that questions of positionality were finally being taken seriously by political scientists many years after their integration in fields such as anthropology, sociology, and geography. Around the same time, the late Lee Ann Fujii, whose 2018 book *Interviewing in Social Science Research* in many ways defined the direction of qualitative methods in political science, gave a job talk in my department. Mesmerized by her account of how local ties shaped mass scale violence in Rwanda, I asked Fujii to join my doctoral committee. Looking back, I realize just how much these formative mentors influenced what I would see as my key responsibilities during my first fieldwork trips to the former Yugoslavia region in 2010 and 2011.
